VMT	Vehicle Miles Traveled
VPH	Vehicle Per Hour
WRCOG	Western Riverside Council of Governments

## 1.0 INTRODUCTION AND KEY FINDINGS

The purpose of this traffic study report is to evaluate the proposed Bedford Marketplace development (“Project”), an expansion of the previously approved commercial development area included within the Arantine Hills Specific Plan. The 80,000 square feet (sf) of commercial retail use included in the Arantine Hills Specific Plan was evaluated in 2015 and 2018 traffic studies prepared for amendments to the Arantine Hills Specific Plan. The proposed Project being studied in this TIA is the expansion of Bedford Marketplace from 80,000 sf to 135,000 sf of retail uses and a 135-room hotel. The incremental expansion of Bedford Marketplace constitutes the “Project” analyzed in this study. Reference to “Bedford Marketplace” includes the total development of the center, equal to the combination of the proposed Project and the previously approved 80,000 sf in the Arantine Hills Specific Plan.

Study objectives include (1) evaluation of interim year 2021 without and with Project conditions; (2) evaluation of horizon year 2035 without and with Project conditions; (3) determination of on-site and off-site improvements needed to achieve City of Corona level of service (LOS) requirements, and (4) estimation of the Project vehicle miles traveled (VMT). The City is in the process of updating its General Plan and adopting an updated Citywide traffic model. This TIA analyzes the incremental change in traffic impacts of the Project in the same manner as previously analyzed in the 2015 and 2018 studies.

The Project is located south of Eagle Glen Parkway – Cajalco Road and west of the I-15 Freeway in the City of Corona as shown on Exhibit 1-1.

### 1.1 PROJECT OVERVIEW

The Project land use plan (shown on Exhibit 1-2) expands the approved commercial site and is proposed to consist of the following uses:

- Hotel - 135 rooms
- Health/fitness club - 38,000 sf
- Day Care Center - 9,990 sf
- Retail Shopping Center – 51,000 sf
- Bank – 6,562 sf
- Restaurant – 21,230 sf
- Gas Station – 18 vehicle fueling positions (vfp’s)
- Automated Car Wash – 3,600 sf

Access to the Project site will be provided via Bedford Canyon Road. The Project will provide two full access driveways and one right-in/right-out driveway, consistent with the amended Arantine Hills Specific Plan.

**EXHIBIT 1-1: TRAFFIC STUDY AREA**

- ▬ RIRO = RIGHT-IN/RIGHT-OUT ONLY ACCESS

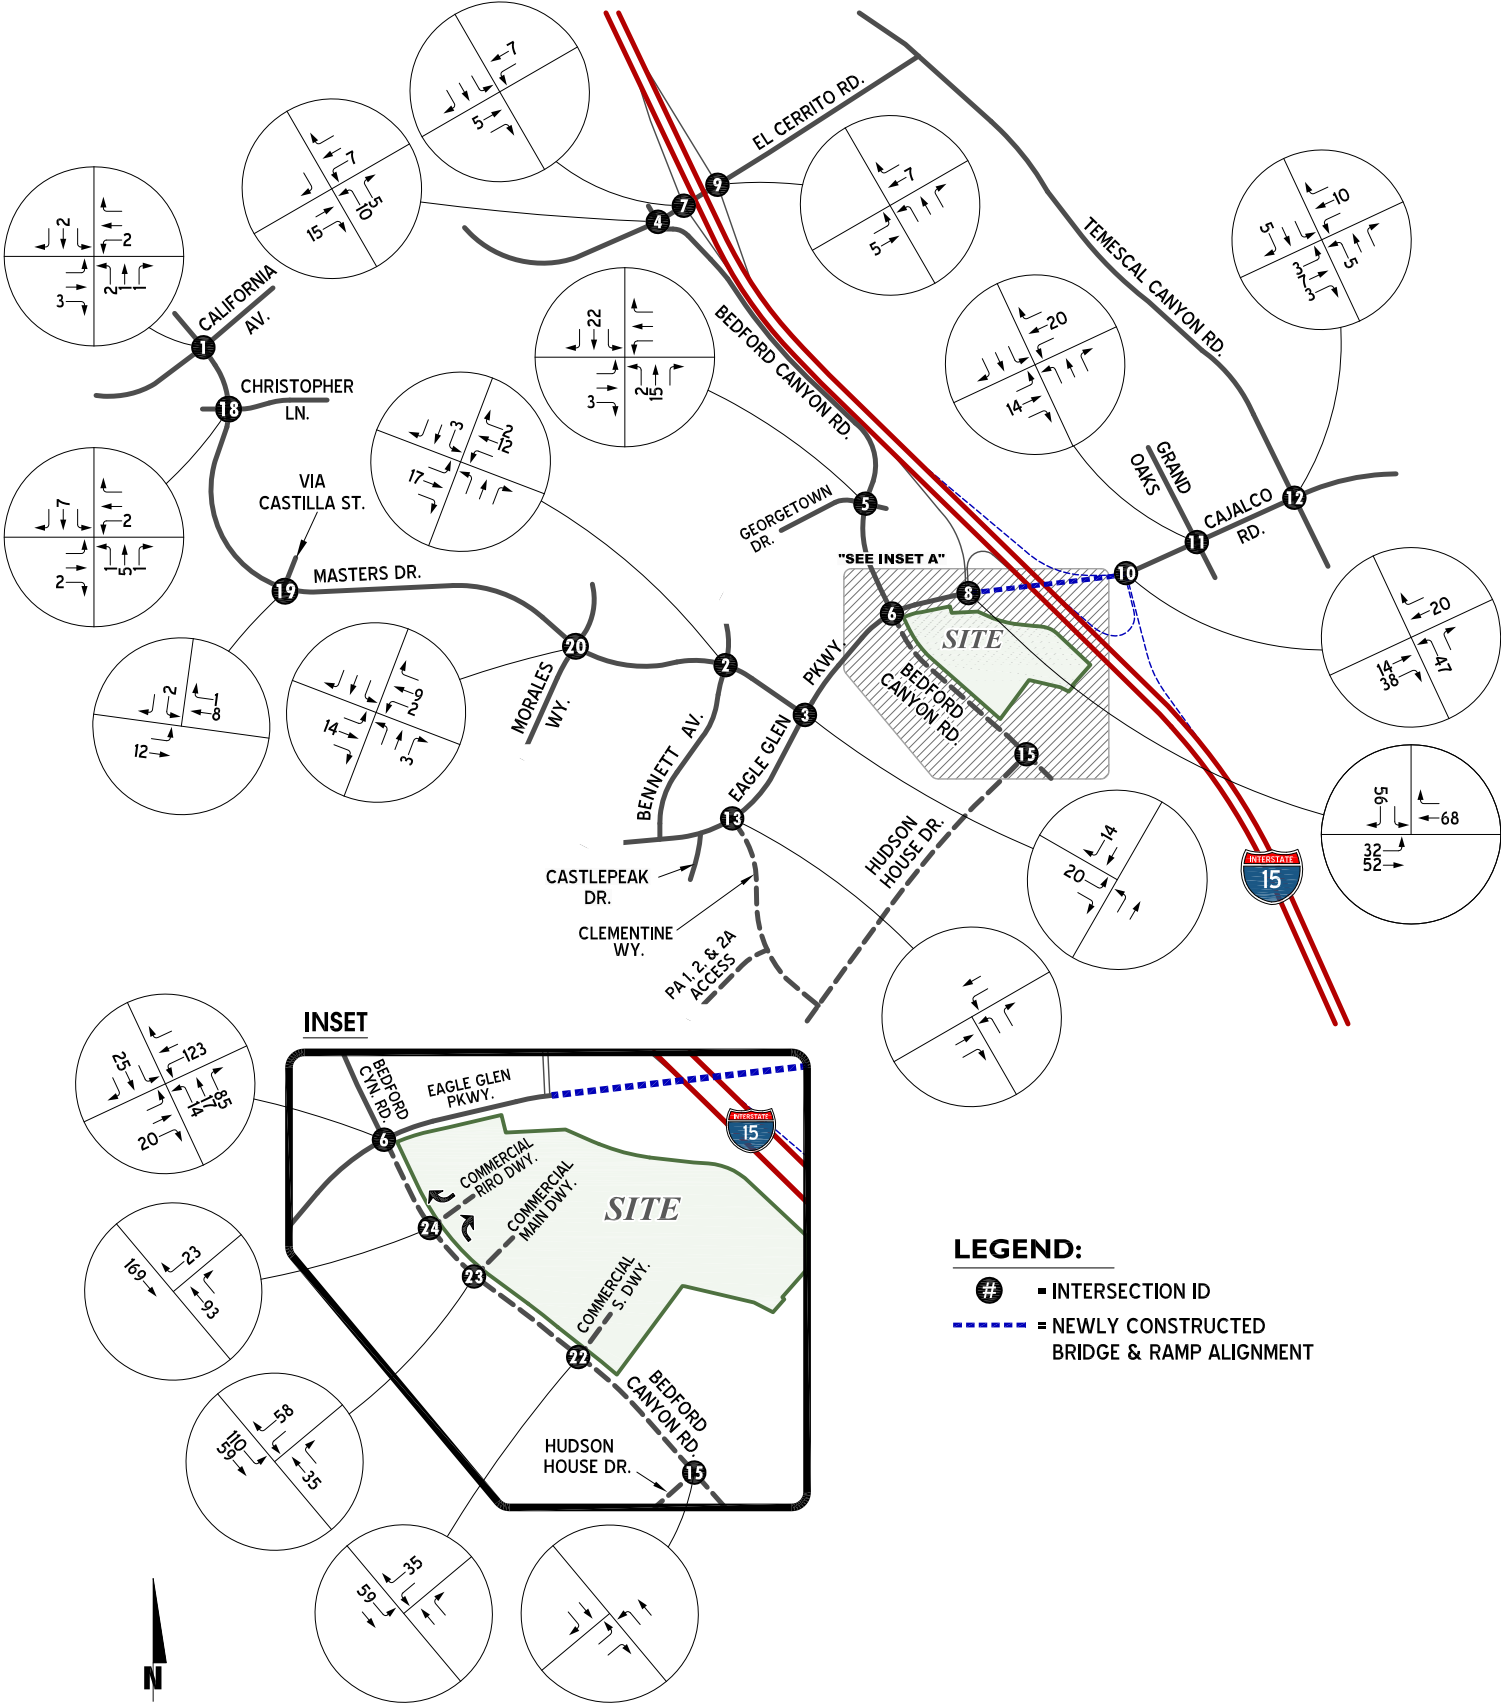

### EXHIBIT 1-2: PRELIMINARY SITE LAYOUT

**EXHIBIT 1-3: PROJECT ONLY VOLUME (EXTERNAL TRIPS) NET INCREASES  
IN COMPARISON TO 80 TSF RETAIL AM PEAK HOUR**

**EXHIBIT 1-4: PROJECT ONLY VOLUME (EXTERNAL TRIPS) NET INCREASES  
IN COMPARISON TO 80 TSF RETAIL PM PEAK HOUR**

Trips generated by the proposed Project's land plan have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) as presented in ITE's most current edition of Trip Generation (10th Edition, 2017). Bedford Marketplace is estimated to generate a total of approximately 7,014 external trips per day with 394 AM peak hour external trips and 686 PM peak hour external trips. Of the total number of vehicle trips, the proposed Project generates 2,061 external trips per day with 281 AM peak hour external trips and 285 PM peak hour external trips.

The net increase to the AM peak hour and PM peak hour project volumes related to the Project, as compared to the previously approved project, are presented in Exhibit 1-3 (morning peak hour) and Exhibit 1-4 (evening peak hour) for the study area intersections.

## 1.2 ANALYSIS SCENARIOS

This traffic study includes the following conditions:

- Existing (2017 and 2018) Conditions
- Interim Year (2021) Without and With Project Conditions
- Horizon Year 2035 Without and With Project Conditions

### 1.2.1 STUDY AREA INTERSECTIONS

The intersection analysis locations for this traffic study are listed in Table 1-1 and previously shown on Exhibit 1-1.

**TABLE 1-1: INTERSECTION ANALYSIS LOCATIONS**

ID	Intersection Location	Jurisdiction
1	Masters Drive / California Avenue	Corona
2	Masters Drive / Bennett Avenue	Corona
3	Masters Drive / Eagle Glen Parkway	Corona
4	Bedford Canyon Road / El Cerrito Road	Corona
5	Bedford Canyon Road / Georgetown Drive	Corona
6	Bedford Canyon Road / Eagle Glen Parkway	Corona
7	I-15 SB Ramps / El Cerrito Road	Caltrans
8	I-15 SB Ramps / Cajalco Road	Caltrans
9	I-15 NB Ramps / El Cerrito Road	Caltrans
10	I-15 NB Ramps / Cajalco Road	Caltrans
11	Grand Oaks / Cajalco Road	Corona
12	Temescal Canyon Road / Cajalco Road	Corona
13	Clementine Way / Eagle Glen Parkway	Corona
15	Bedford Canyon Road / Hudson House Drive	Corona
18	Masters Drive / Christopher Lane	Corona
19	Via Castilla Street / Masters Drive	Corona
20	Morales Way / Masters Drive	Corona

**TABLE 1-1: INTERSECTION ANALYSIS LOCATIONS (CONTINUED)**

ID	Intersection Location	Jurisdiction
22	Bedford Canyon Road / Commercial South Driveway	Corona
23	Bedford Canyon Road / Commercial Main Driveway	Corona
24	Bedford Canyon Road / Commercial Right-In/Right-Out (RIRO) Driveway	Corona

### 1.3 STUDY AREA CIRCULATION CONDITIONS

Construction activity is still underway in the Cajalco Road / I-15 interchange area. A new 6-lane bridge has been built over the I-15 mainline, replacing the previous 2-lane divided roadway, between the I-15 SB and I-15 NB ramps. Extensive improvements are also being made to the I-15 on and off ramps.

Cajalco Road / I-15 interchange area improvement plans are illustrated in Appendix 1.1. Consistent with the previously approved Arantine Hills Traffic Impact Analysis (2015), LOS "E" is anticipated to be considered acceptable level of service for the I-15 / Cajalco Road interchange.

#### 1.3.1 INTERSECTION OPERATIONS ANALYSIS

For Existing (2017 and 2018) Conditions, the following study area intersections are currently operating at deficient level of service during the morning peak hours:

ID	Intersection Location	Jurisdiction
1	Masters Drive / California Avenue	Corona
18	Masters Drive / Christopher Lane	Corona
19	Via Castilla Street / Masters Drive	Corona
20	Morales Way / Masters Drive	Corona

Improvements have previously been identified to address these existing deficiencies in 2015 and 2018 traffic studies prepared for amendments to the Arantine Hills Specific Plan.

For Interim Year (2021) conditions, the improvements under construction at or near the Cajalco Road / I-15 Interchange area are assumed to be completed. No additional off-site intersections are anticipated to operate at unacceptable level of service, beyond those intersections previously identified under existing conditions.

For Horizon Year 2035 Without Project Conditions, the following four additional intersections are anticipated to operate at deficient levels of service (without currently planned improvements), beyond those intersections previously identified under existing conditions:

ID	Intersection Location	Jurisdiction
2	Masters Drive / Bennett Avenue	Corona
5	Bedford Canyon Road / Georgetown Drive	Corona
7	I-15 SB Ramps / El Cerrito Road	Caltrans
12	Temescal Canyon Road / Cajalco Road	Corona

Improvements have also previously been identified to address these 2035 deficiencies in 2015 and 2018 traffic studies prepared for amendments to the Arantine Hills Specific Plan.

For Horizon Year 2035 With Project Conditions, there are no new intersections anticipated to operate at deficient level of service, beyond the intersections identified under 2035 Without Project Conditions.

### 1.3.2 TRAFFIC SIGNAL WARRANT ANALYSIS

For Existing (2017 and 2018) Conditions, the following unsignalized intersections warrant a traffic signal:

ID	Intersection Location	Jurisdiction
1	Masters Drive / California Avenue	Corona
18	Masters Drive / Christopher Lane	Corona
20	Morales Way / Masters Drive	Corona

For Interim Year (2021) Without Project Conditions, the intersection of Bedford Canyon Road / Commercial Main Driveway (#23) is anticipated to meet traffic signal warrants (in addition to the intersection previously identified under Existing conditions).

It should be noted that new traffic signals were recently installed at the intersections of Masters Drive / Eagle Glen Parkway (#3) and Clementine Way / Eagle Glen Parkway (#13).

For Horizon Year 2035 Without Project Conditions, the following intersections are anticipated to meet traffic signal warrants, in addition to the intersections identified previously under Interim Year (2021) conditions:

ID	Intersection Location	Jurisdiction
2	Masters Drive / Bennett Avenue	Corona
5	Bedford Canyon Road / Georgetown Drive	Corona

For Horizon Year 2035 With Project Conditions, there are no additional intersections anticipated to meet traffic signal warrants (beyond the intersections identified previously under 2035 Without Project conditions).

## 1.4 RECOMMENDED IMPROVEMENTS

For Interim Year (2021) Without and With Project Conditions, the following off-site improvements have previously been recommended in the study area in 2015 and 2018 traffic studies prepared for amendments to the Arantine Hills Specific Plan:

**Masters Drive / California Drive (#1)**

- Participate in the installation of a traffic signal.

**Bedford Canyon Road / Eagle Glen Parkway - Cajalco Road (#6) – Under Construction**

- Traffic Signal Modification.
- Adjust the east leg striping to provide a 2nd receiving lane.
- NB Approach: Participate in the construction of one left turn lane, one through lane and one right turn lane with overlap phasing.
- SB Approach: Modify striping to provide a new shared left-through lane.
- EB Approach: Modify striping to provide a new shared through/right turn lane.
- WB Approach: Construct 2 left turn lanes.

**I-15 SB Ramps / Cajalco Road (#8) – Under Construction**

- SB Approach: Participate in the construction of 2<sup>nd</sup> left turn lane and 2<sup>nd</sup> right turn lane.
- EB Approach: Participate in the construction of 2<sup>nd</sup> left turn lane, 2<sup>nd</sup> through lane, and 3<sup>rd</sup> through lane.
- WB Approach: Participate in the construction of 2<sup>nd</sup> through lane
- It should be noted that the planned I-15/Cajalco Road interchange improvements accommodate triple southbound left turns. However, based on the intersection operations results, providing a minimum of two southbound left turns would result to an acceptable level of service.

**I-15 NB Ramps / Cajalco Road (#10)**

- NB Approach: Participate in the construction of 2<sup>nd</sup> left turn lane and 2<sup>nd</sup> right turn lane.
- EB Approach: Participate in the construction of 2<sup>nd</sup> and 3<sup>rd</sup> through lanes and one right turn lane with overlap phasing.
- WB Approach: Participate in the construction of 3<sup>rd</sup> and 4<sup>th</sup> through lanes.

**Grand Oaks / Cajalco Road (#11)**

- EB Approach: Participate in the construction of 3<sup>rd</sup> through lane.

**Masters Drive / Christopher Lane (#18)**

- Participate in the installation of a traffic signal, or roundabout.

**Via Castilla Street / Masters Drive (#19)**

- Participate in the conversion to cross-street stop control on Via Castilla Street (in conjunction with Masters Drive / Christopher Lane and Morales Way / Masters Drive traffic signals), or roundabout.

**Morales Way / Masters Drive (#20)**

- Participate in the installation of a traffic signal, or roundabout.

For Horizon Year 2035 Without and With Project Conditions, the following off-site improvements have previously been recommended in the study area in 2015 and 2018 traffic studies prepared for amendments to the Arantine Hills Specific Plan:

**Masters Drive / Bennett Avenue (#2)**

- Participate in the installation of a traffic signal.

**Bedford Canyon Road / Georgetown Drive (#5)**

- Participate in the installation of a traffic signal.

**I-15 SB Ramps / El Cerrito Road (#7)**

- EB Approach: Participate in the construction of a separate right turn lane.

**Temescal Canyon Road / Cajalco Road (#12)**

- Participate in the widening of Cajalco Road east of Temescal Canyon Road to provide 2<sup>nd</sup> and 3<sup>rd</sup> eastbound lane within 600 feet of Temescal Canyon Road.
- SB Approach: Modify striping to provide a 2<sup>nd</sup> left turn lane, in addition to the existing two through lanes.
- EB Approach: Modify striping to provide a 2<sup>nd</sup> through lane, in addition to the existing left turn lane and right turn lane.
- WB Approach: Construct one right turn lane.

Improvements recommended in this study with the proposed Project are consistent to the previously approved Arantine Hills TIA (2015) under 2035 conditions; the Project does not trigger the need for additional improvements beyond those identified in the 2015 study for 2035 conditions.

**1.5 SITE ACCESS**

Access in and out of the Project occurs at three existing driveways along Bedford Canyon Road south of Eagle Glen Parkway/Cajalco Road. The northerly driveway is limited to right-in right-out (RIRO) conditions, without an opening of the median on Bedford Canyon Road. It serves as a convenient exit for vehicles leaving the Gas Station and Automated Car Wash, bound for Eagle Glen Parkway/Cajalco Road. The RIRO driveway also accommodates entering vehicles from northbound on Bedford Canyon Road.

The main Project driveway is located at a mid-point along the site frontage to Bedford Canyon Road. It is a full access location, serving left and right turns to and from Bedford Canyon Road with traffic signal control. With expansion of commercial uses at the Project site, the existing

southbound left turn lane (approximately 50 feet turn pocket) serving the main Project driveway is recommended to be extended to provide 200 feet of vehicle queuing.

The southerly Project driveway is also a full access location, serving left and right turns to and from Bedford Canyon Road with cross-street stop sign control of the exiting vehicles. At this location, the existing southbound left turn lane is recommended to be extended to provide 150 feet of vehicle queuing with the expansion of commercial uses at the Project site.

An efficient network of on-site driveways provides connectivity to all access points and facilitates the internal flow of activity between the variety of Project land uses.

## 1.6 VEHICLE MILES TRAVELED

The California Environmental Quality Act (CEQA) procedures for determination of transportation impacts have recently changed to an evaluation of Vehicle Miles Traveled (VMT) rather than vehicle delay or level of service, due to Senate Bill 743 (SB 743). The City of Corona VMT Analysis Guidelines provide a structure for evaluating VMT on a project level basis. Vehicle delay and level of service are still used in Corona traffic studies, as presented in sections 2 through 7 of this traffic study.

Approximately 582 employees (including 240 temporary and 342 permanent positions) are anticipated for Bedford Marketplace. The previous approval of commercial use for the site accounts for approximately 320 employees (based upon an average of 4 employees per tsf of gross floor area). An increase of approximately 262 jobs will occur with the Project.

The mix of land uses (including hotel, retail, and service-oriented uses for Bedford Marketplace) is anticipated to encourage trip capture on-site, resulting in a lower than usual VMT per service population (SP). The combination of banking, restaurant, gas, health club, retail, and a day care center in close proximity to residential and hotel uses is expected to encourage internal interaction.

Pathways and bike routes associated with the site provide an integrated sidewalk and trails system that conveniently links the Bedford Marketplace site to community facilities, residential neighborhoods, and parks. The Project is also located within a Low VMT generating traffic analysis zone (TAZ), with a VMT / service population between 26.6 and 27.8 VMT/SP, which is less than the City of Corona average of approximately 30 VMT/SP.

The VMT / SP associated with the Project could potentially fall within the range of approximately 26.6 to 31.5, but the Project location, mix of uses, and effectiveness of the design features support a conservative estimate of 29 VMT / SP, which has been developed utilizing the procedures documented in Section 7. The resulting total Project VMT is approximately 7,598 for the 262 employees added by the project, which is less than the City average per SP and considered a less than significant impact based upon City criteria.

This page intentionally left blank.

## 2.0 AREA CONDITIONS

This section provides a summary of the existing circulation network, the City of Corona General Plan Circulation Network, and a review of existing peak hour intersection operations, roadway analyses and traffic signal warrants.

### 2.1 EXISTING CIRCULATION NETWORK

Per discussion with City of Corona staff, the study area includes a total of twenty (20) existing and future intersections as shown previously on Exhibit 1-1. Of these twenty (20) intersections, the existing study area circulation network includes fifteen (15) intersections. The other five (5) intersections in the study area are future planned intersections that are currently under construction (Arantine Hills roadways and key project driveways).

Exhibit 2-1 illustrates the study area intersections located near the proposed Project and identifies the number of through traffic lanes for existing roadways and intersection traffic controls (during interchange construction in 2018).

### 2.2 CITY OF CORONA GENERAL PLAN CIRCULATION ELEMENT

As previously noted, the Project site is located within the City of Corona. Exhibit 2-2 shows the City of Corona General Plan Circulation Element, and Exhibit 2-3 illustrates the City of Corona General Plan Roadway Cross-Sections.

### 2.3 EXISTING (2017 AND 2018) TRAFFIC COUNTS

The AM peak hour traffic volumes were determined by counting traffic volumes in the three hour period between 6:00 and 9:00 AM. The PM peak hour traffic volumes were identified by counting traffic volumes in the two hour period from 4:00 to 6:00 PM. For the purpose of this analysis, the counts provided in the November 2018 traffic assessment for the Arantine Hills Specific Plan Amendment No. 2 are presented in this report due to ongoing construction activity in the Cajalco interchange area.

The manual AM and PM peak hour turning movement counts were conducted in October 2017 and March 2018. The raw manual peak hour turning movement traffic count data sheets are included in Appendix "2.1". Flow conservation checks have been performed to the existing peak hour counts in an effort to ensure the flow of traffic volumes between closely spaced intersections is maintained.

Existing (2017 and 2018) AM and PM peak hour intersection volumes are shown on Exhibit 2-4 and Exhibit 2-5, respectively.

- = ROADWAY CONFIGURATION DURING INTERCHANGE CONSTRUCTION

**EXHIBIT 2-5: EXISTING (2017/2018) PM PEAK HOUR INTERSECTION VOLUMES**

**LEGEND:**

- # = INTERSECTION ID
- = ROADWAY CONFIGURATION DURING INTERCHANGE CONSTRUCTION

Existing (2017 and 2018) average daily traffic (ADT) volumes on arterial highways throughout the study area are shown on Exhibit 2-6. The ADT volumes are either based on traffic counts or have been estimated by factoring up peak hour counts. The following formula was used to estimate the daily volume for each intersection leg if daily traffic counts were not available:

$$PM \text{ Peak Hour (Approach Volume + Exit Volume)} \times 12 = \text{Leg Volume}$$

## 2.4 EXISTING (2017 AND 2018) CONDITIONS INTERSECTION OPERATIONS ANALYSIS

Existing (2017 and 2018) peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 4.2 *Intersection Capacity Analysis* of this report. The intersection operations analysis results are summarized in Table 2-1 which indicates that the intersections of Masters Drive / California Avenue (#1), Masters Drive / Christopher Lane (#18), Via Castilla Street / Masters Drive (#19), and Morales Way / Masters Drive (#20) do not operate at an acceptable level of service (LOS) during the peak hours. The intersection operations analysis worksheets are included in Appendix “2.2” of this TIA.

## 2.5 EXISTING (2017 AND 2018) CONDITIONS TRAFFIC SIGNAL WARRANTS ANALYSIS

Traffic signal warrants for Existing (2017 and 2018) traffic conditions are based on existing peak hour intersection turning volumes. For Existing (2017 and 2018) traffic conditions, the following unsignalized study area intersections appear to warrant traffic signals (See Appendix “2.3”):

ID	Intersection Location	Jurisdiction
1	Masters Drive / California Avenue	Corona
18	Masters Drive / Christopher Lane	Corona
20	Morales Way / Masters Drive	Corona

It should be noted that in the 2015 traffic study, the intersection of Masters Drive / Eagle Glen Parkway (#3) warrants a traffic signal under Existing (2014 and 2015) conditions and the intersection of Clementine Way / Eagle Glen Parkway (#13) did not exist. New traffic signals were recently installed at these locations. Therefore, evaluation of existing (2017 and 2018) traffic signal warrants at the intersection of Masters Drive / Eagle Glen Parkway (#3) and Clementine Way / Eagle Glen Parkway (#13) are no longer needed.

**EXHIBIT 2-6: EXISTING (2017/2018) AVERAGE DAILY TRAFFIC (ADT) VOLUMES**

**LEGEND:**

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; 1! = Shared Left-Through-Right turn lane; d= Defacto Right Turn Lane;

1 = Lane reduction during interchange construction

<sup>2</sup> Per the Highway Capacity Manual 6th Edition (HCM6), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown. Delay and level of service is calculated using Synchro 10.1 analysis software.

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>3</sup> TS = Traffic Signal; CSS = Cross-street Stop; AWS = All-Way Stop

## 3.0 PROJECTED FUTURE TRAFFIC

Future traffic from the Project has been estimated for interim year (2021) conditions, horizon year 2035 conditions.

Future 2021 traffic is represented by the combination of existing traffic, ambient growth (total of 8%), approved Arantine Hills Specific Plan traffic, and increases in traffic volumes associated with the added Project land uses.

The horizon year 2035 forecasts are derived from the approved Arantine Hills Specific Plan Traffic Assessment (November 2018).

### 3.1 PROJECT TRAFFIC

#### 3.1.1 PROJECT TRIP GENERATION

Table 3-1 presents overall Project trip generation. Bedford Marketplace is anticipated to generate a total of approximately 7,014 external trips per day with 394 AM peak hour external trips and 686 PM peak hour external trips. Of the total trips for Bedford Marketplace, the Project will generate approximately 2,061 external trips per day with 281 AM peak hour external trips and 285 PM peak hour external trips.

The ITE Trip Generation manual is a nationally recognized source for estimating site specific trip generation. The ITE 2017 Trip Generation manual (10th Edition) trip generation rates are used to estimate Project trip ends generated by each individual use, which is then considered in combination with the mix of site uses. Internal interaction represents the trips captured internally because of the opportunity to visit various land uses without using the arterial roadway system (for example, exiting the hotel in the morning and stopping at the gas station before leaving the Bedford Marketplace property). Internal capture calculations for each use are indicated on Table 1.

In addition to the internal capture adjustment, trips generated by the commercial site are adjusted due to interactions with nearby residential areas. Due to the location of Bedford Marketplace, some of the existing and future residential trips are diverted from the surrounding arterial system. These trips represent travelers who interact with a shop, service, or restaurant and then continue traveling elsewhere. To understand the traffic volume effects at study area intersections, estimates of diverted pass-by trips are necessary.

As shown on Table 3-1, in comparison to the approved commercial trip generation in the Arantine Hills Traffic Assessment (November 2018), the Project is anticipated to generate an additional 2,061 external trips per day with 281 AM peak hour external trips and 285 PM peak hour external trips.

#### 3.1.2 PROJECT TRIP DISTRIBUTION

Trip distribution is the process of identifying the probable destinations, directions or traffic routes that will be utilized by Project traffic.

TABLE 3-1: BEDFORD MARKETPLACE PROJECT TRIP GENERATION SUMMARY

Trip Generation Rates <sup>1</sup>

R:\UXR\jobs\_12100-12500\12554\Excel\12554 - Report.xlsx\3-1

The potential interaction between the planned land uses and surrounding regional access routes are considered to identify the routes where Project traffic would travel. The Project trip distribution was developed based on anticipated travel patterns to and from the Project site and are consistent with the commercial trip distribution patterns reviewed and approved by the City as part of the 2015 and 2018 studies. The proposed Project does not cause any change to the previously approved trip distribution patterns included in the *Arantine Hills Modified Project Traffic Study*, dated September 11, 2015 and *Arantine Hills Specific Plan Amendment No. 2 Traffic Assessment*, dated November 12, 2018. Recent select zone traffic assignments from the recently updated City of Corona traffic model were also reviewed.

The trip distribution pattern is heavily influenced by the geographical location of the site, the location of surrounding uses, and the proximity to the arterial network and regional freeway system. Exhibit 3-1 include the Project distribution used in this study.

### **3.1.3 MODAL SPLIT**

The traffic-reducing potential of public transit has not been considered in this report. Essentially the traffic projections are "conservative" in that public transit might be able to reduce the traffic volumes.

### **3.1.4 PROJECT TRIP ASSIGNMENT**

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project.

Based on the identified Project traffic generation and trip distribution patterns, the increase in AM and PM peak hour volumes generated by the Project are shown on Exhibit 3-2 and Exhibit 3-3, respectively.

## **3.2 TOTAL FUTURE TRAFFIC**

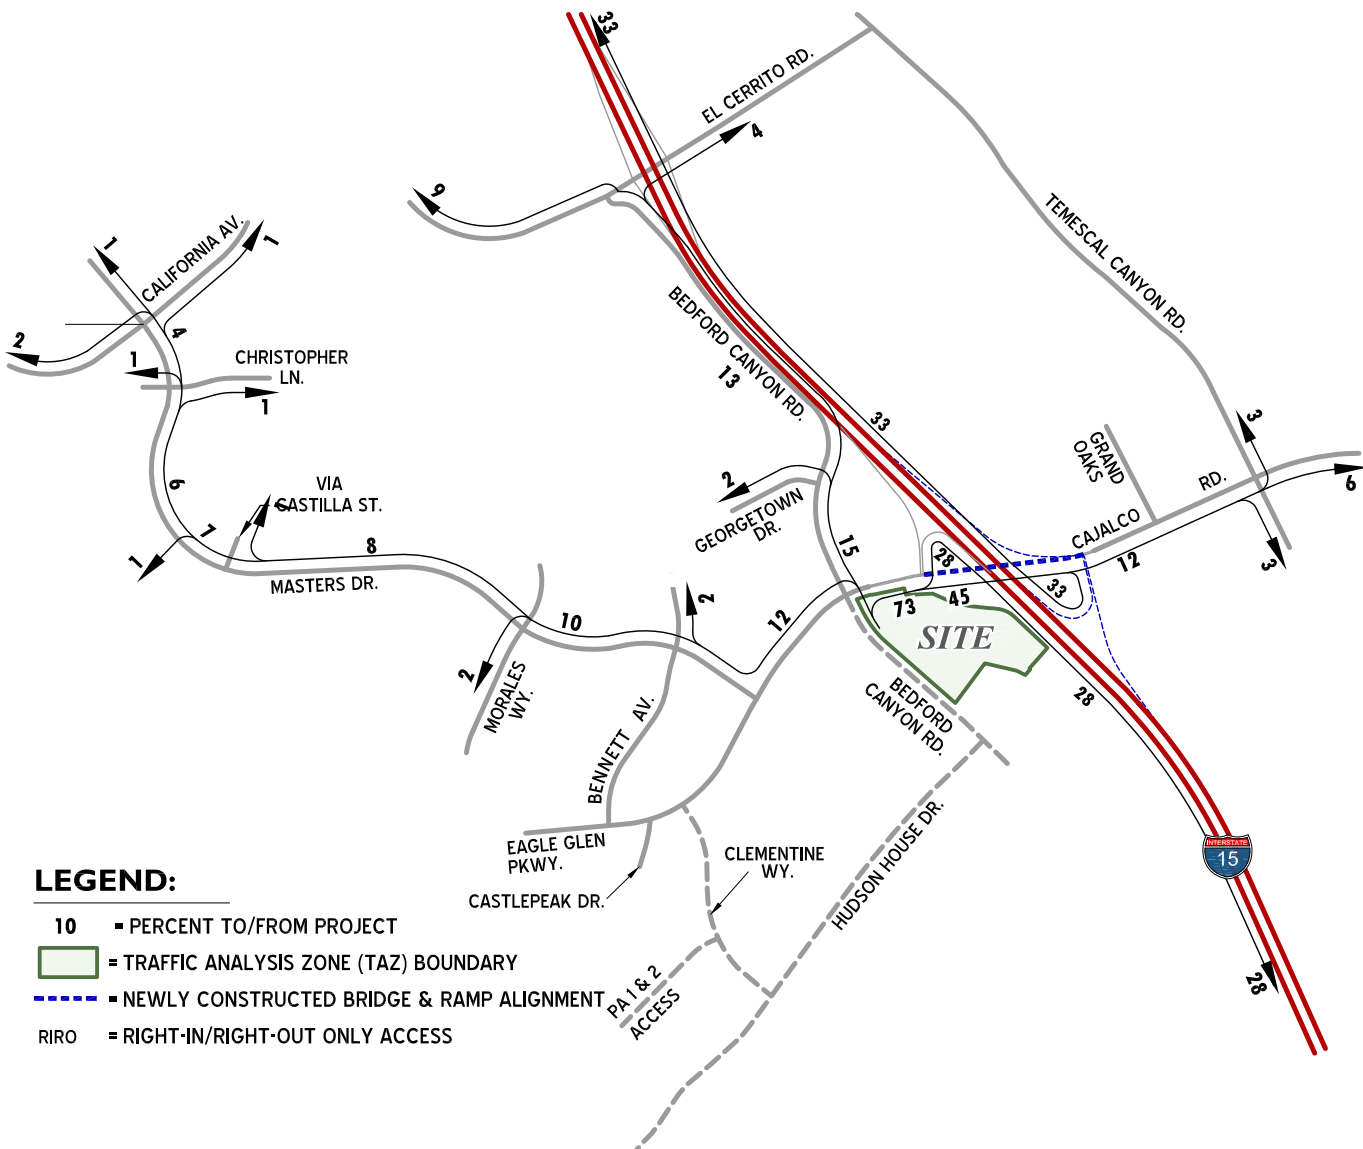

This analysis assesses the following future traffic conditions.

- Interim Year (2021) Without Project conditions
- Interim Year (2021) With Project conditions
- Horizon Year 2035 Without Project Conditions
- Horizon Year 2035 With Project Conditions

Interim Year (2021) Without Project conditions AM and PM peak hour intersection turning movement volumes are shown on Exhibit 3-4 and Exhibit 3-5, respectively. Interim Year (2021) With Project conditions AM and PM peak hour intersection turning movement volumes are shown on Exhibit 3-6 and Exhibit 3-7, respectively.

Horizon Year 2035 Without Project Conditions AM and PM peak hour intersection turning movement volumes are shown on Exhibit 3-8 and 3-9, respectively. Horizon Year 2035 With Project Conditions AM and PM peak hour intersection turning movement volumes are shown on Exhibit 3-10 and Exhibit 3-11, respectively.

### 3.3 SITE ACCESS IMPROVEMENTS

Access in and out of Bedford Marketplace occurs at three existing driveways along Bedford Canyon Road south of Eagle Glen Parkway/Cajalco Road. The northerly driveway is limited to right-in right-out (RIRO) conditions, without an opening of the median on Bedford Canyon Road. It serves as a convenient exit for vehicles leaving the Gas Station and Automated Car Wash, bound for Eagle Glen Parkway/Cajalco Road. The RIRO driveway also accommodates entering vehicles from northbound on Bedford Canyon Road.

The main driveway to Bedford Marketplace is located at a mid-point along the site frontage to Bedford Canyon Road. It is a full access location, serving left and right turns to and from Bedford Canyon Road with traffic signal control. With additional traffic generated by the Project, the existing southbound left turn lane serving the main driveway to Bedford Marketplace is recommended to be extended to provide 200 feet of vehicle queuing.

The southerly driveway to Bedford Marketplace is also a full access location, serving left and right turns to and from Bedford Canyon Road with cross-street stop sign control of the exiting vehicles. At this location, the existing southbound left turn lane is recommended to be extended to provide 150 feet of vehicle queuing with to accommodate the additional traffic generated by the Project.

An efficient network of on-site driveways provides connectivity to all access points and facilitates the internal flow of activity between the variety of land uses.

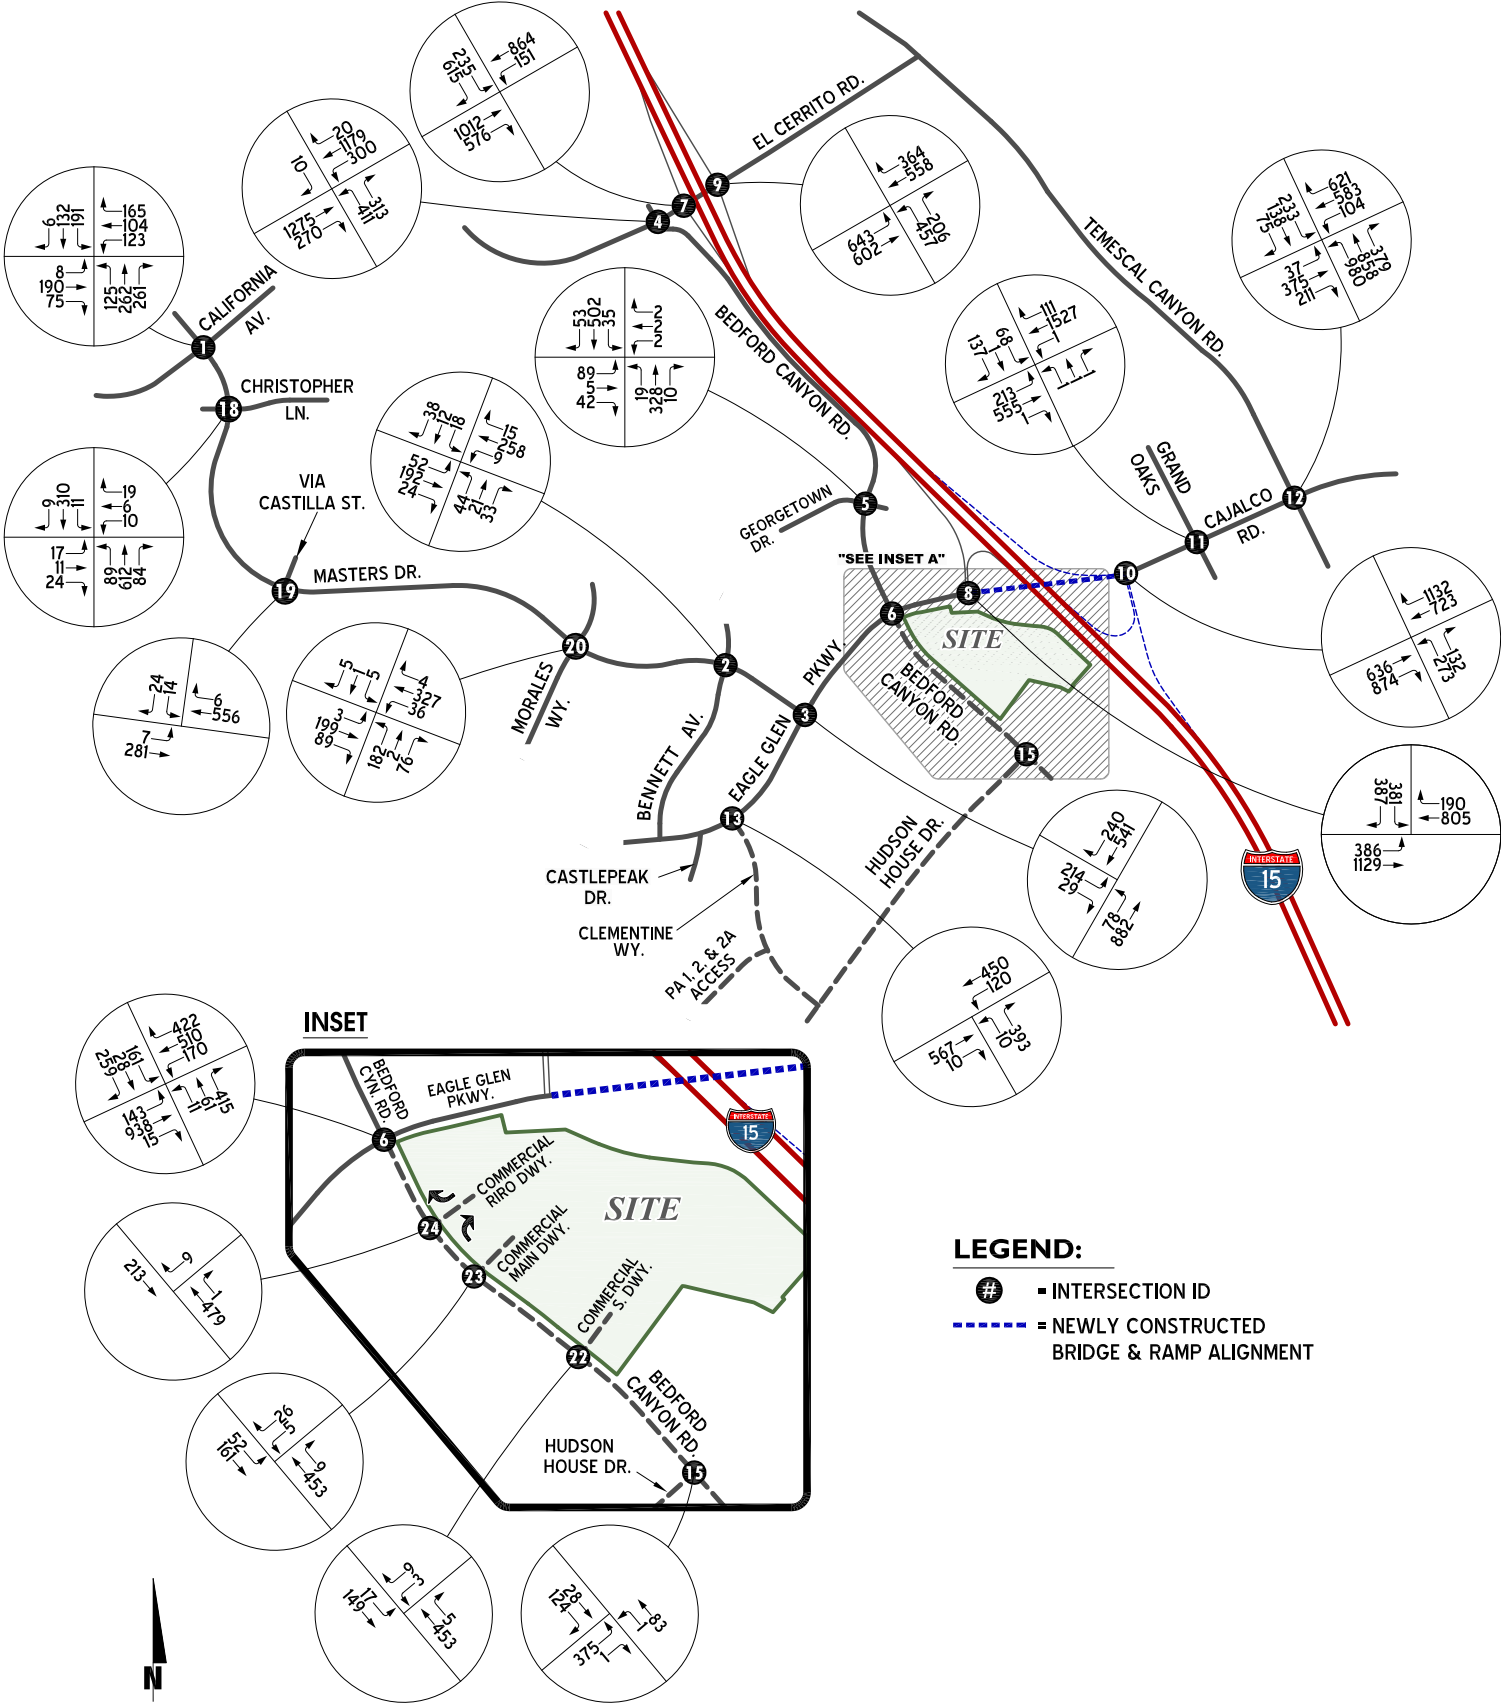

In conjunction with approved 80 TSF commercial, the following site access provisions were included as follows, and remain unchanged with the Project:

- Restrict the intersection of Bedford Canyon Road / Commercial RIRO Driveway (#24) to a right-in/right-out only intersection
- Install a traffic signal at the Bedford Canyon Road / Commercial Main Driveway (#23).
- Provide a well-integrated network of on-site driveways to facilitate the internal flow of activity between the variety of Project land uses.
- Sight distance at each project access driveway should be reviewed with respect to Caltrans and City of Corona sight distance standards at the time of preparation of final grading, landscape and street improvement plans.

The Project generates the need for the following site access improvements as illustrated on Exhibit 3-12:

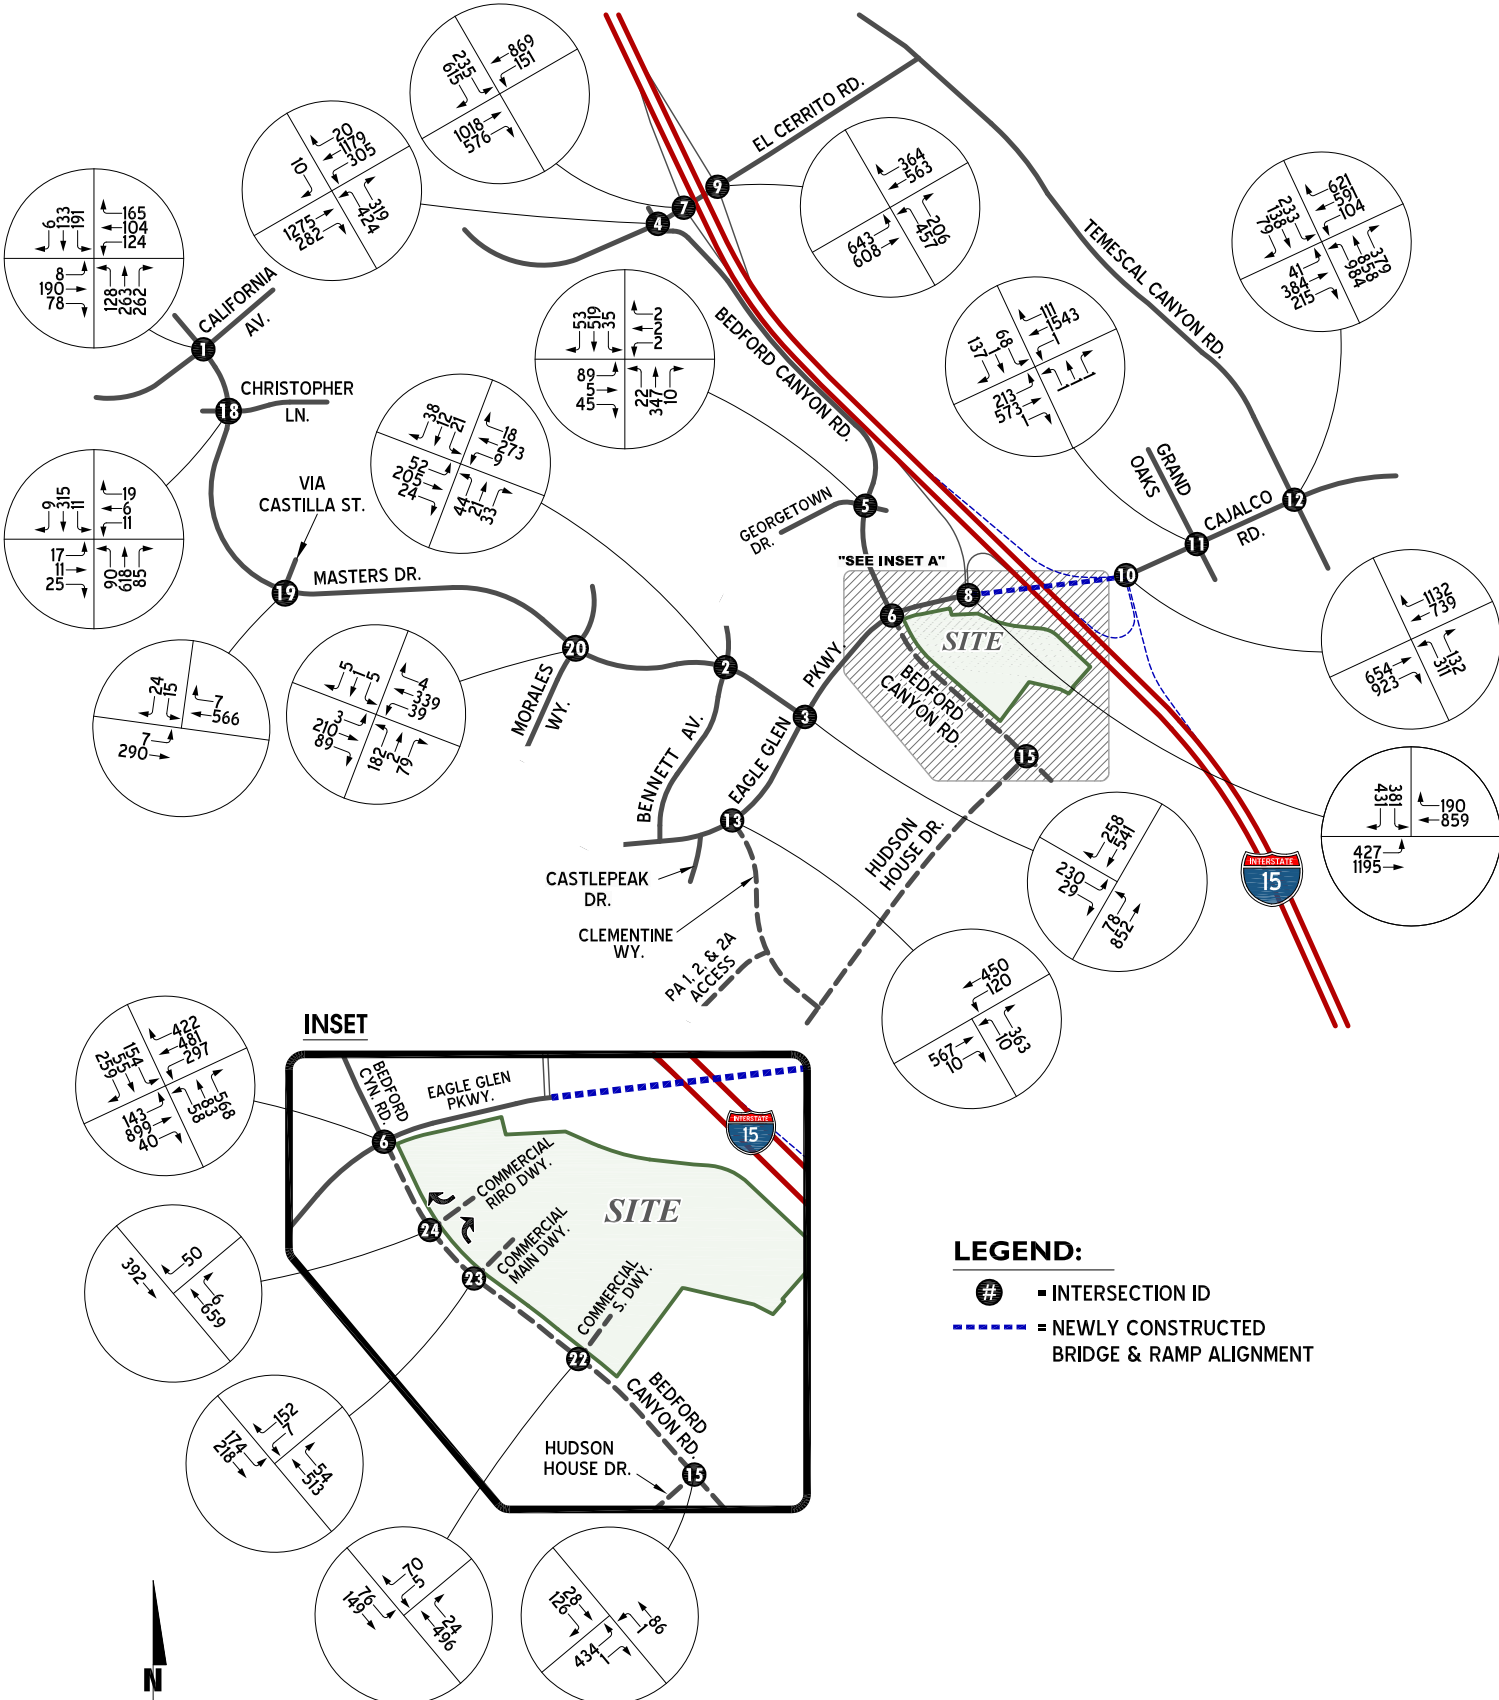

- Extend the existing southbound left turn lane at Bedford Canyon Road / Commercial Main Driveway (#23) to provide 200 ft. storage length.
- Extend the existing southbound left turn lane at Bedford Canyon Road / Commercial South Driveway (#22) to provide a minimum of 150 ft. storage length.
- On-site traffic signing and striping should be implemented in conjunction with detailed construction plans for the Project, along with any modifications to sight distance.

### EXHIBIT 3-8: HORIZON YEAR 2035 WITHOUT PROJECT AM PEAK HOUR INTERSECTION VOLUMES

**EXHIBIT 3-10: HORIZON YEAR 2035 WITH PROJECT  
AM PEAK HOUR INTERSECTION VOLUMES**

**EXHIBIT 3-11: HORIZON YEAR 2035 WITH PROJECT  
PM PEAK HOUR INTERSECTION VOLUMES**

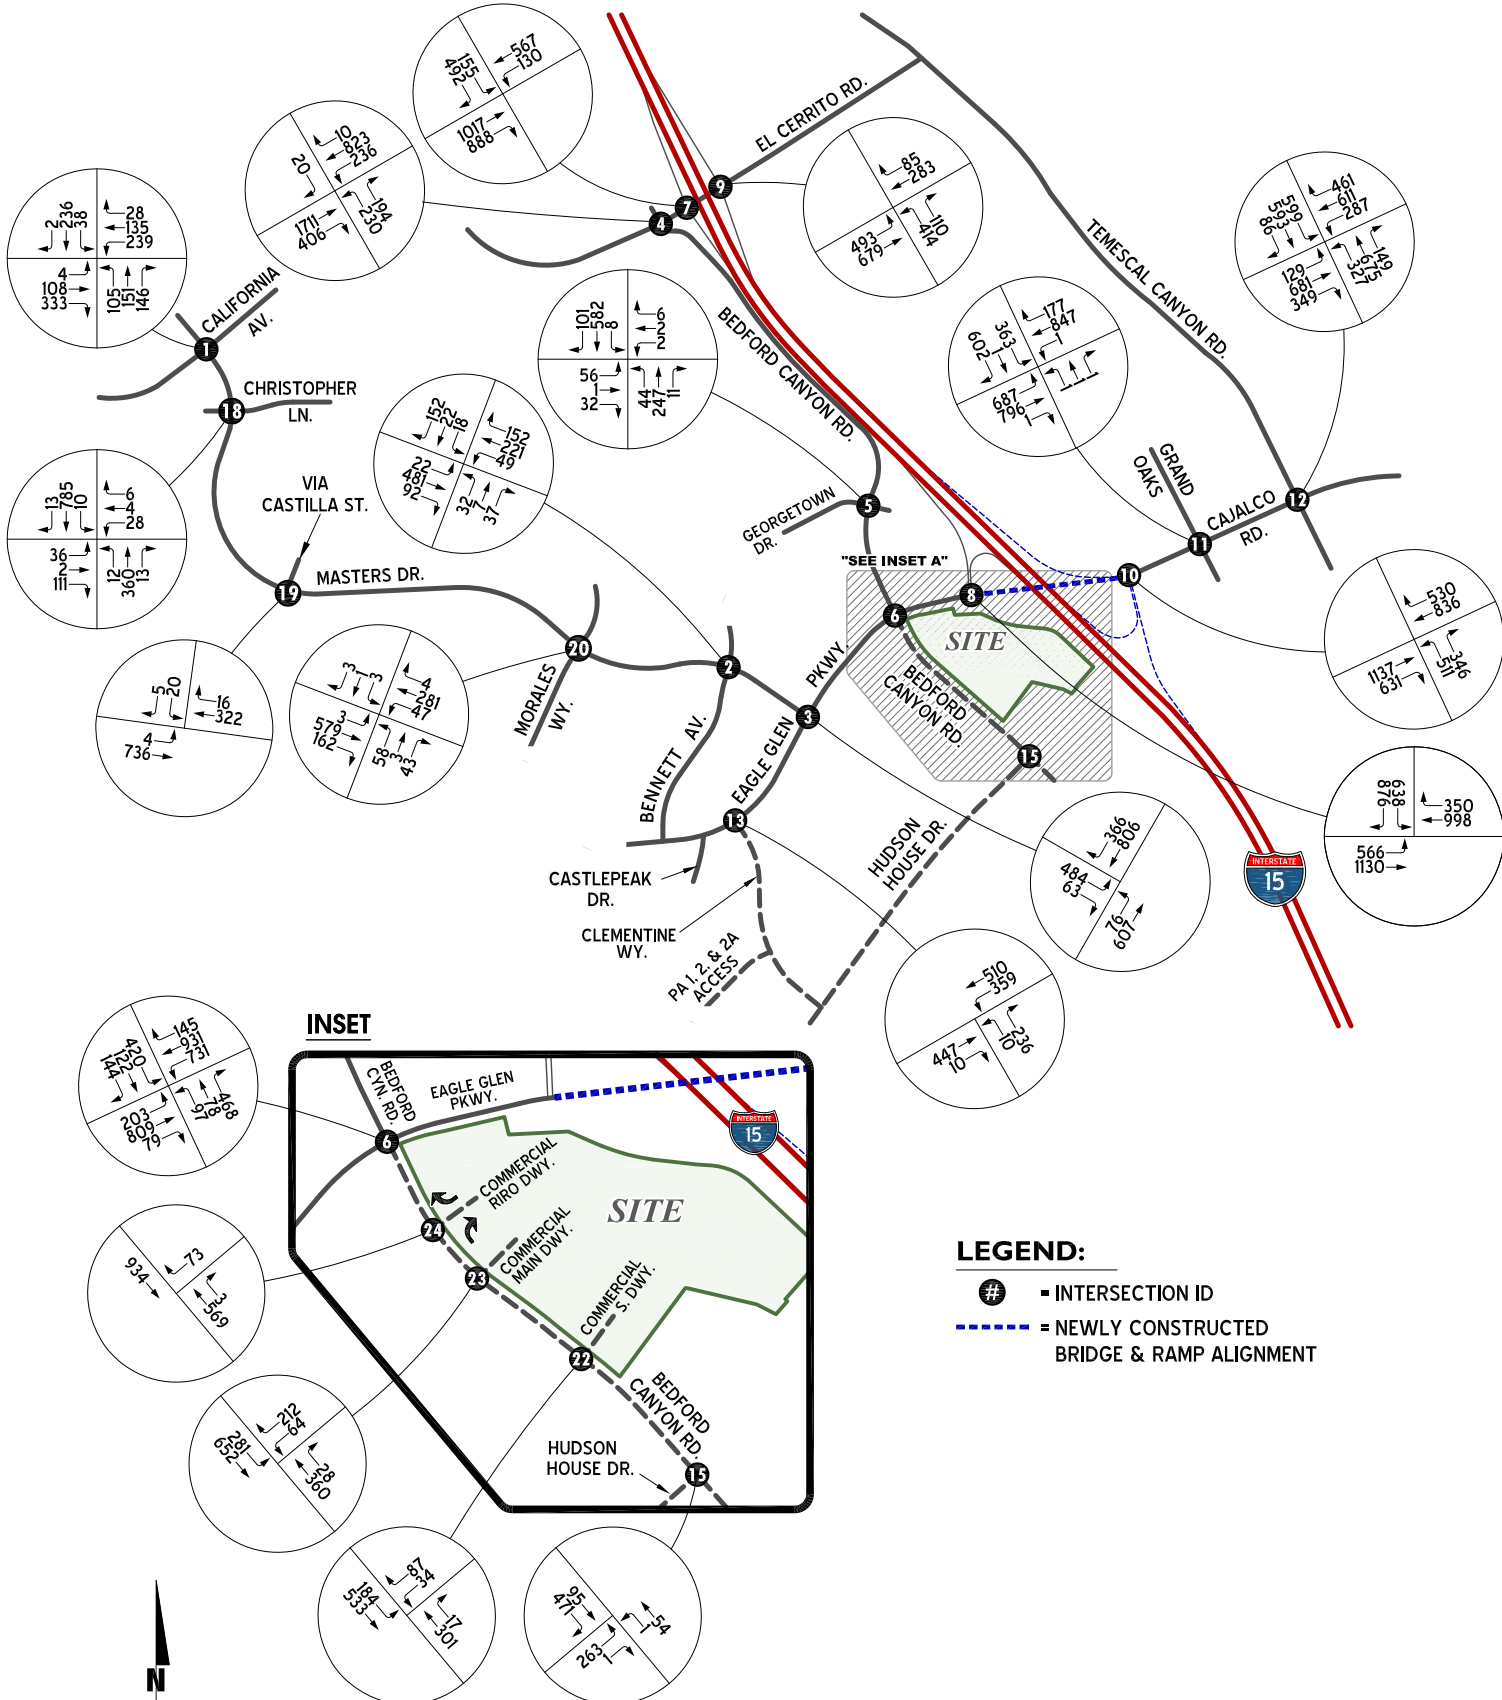

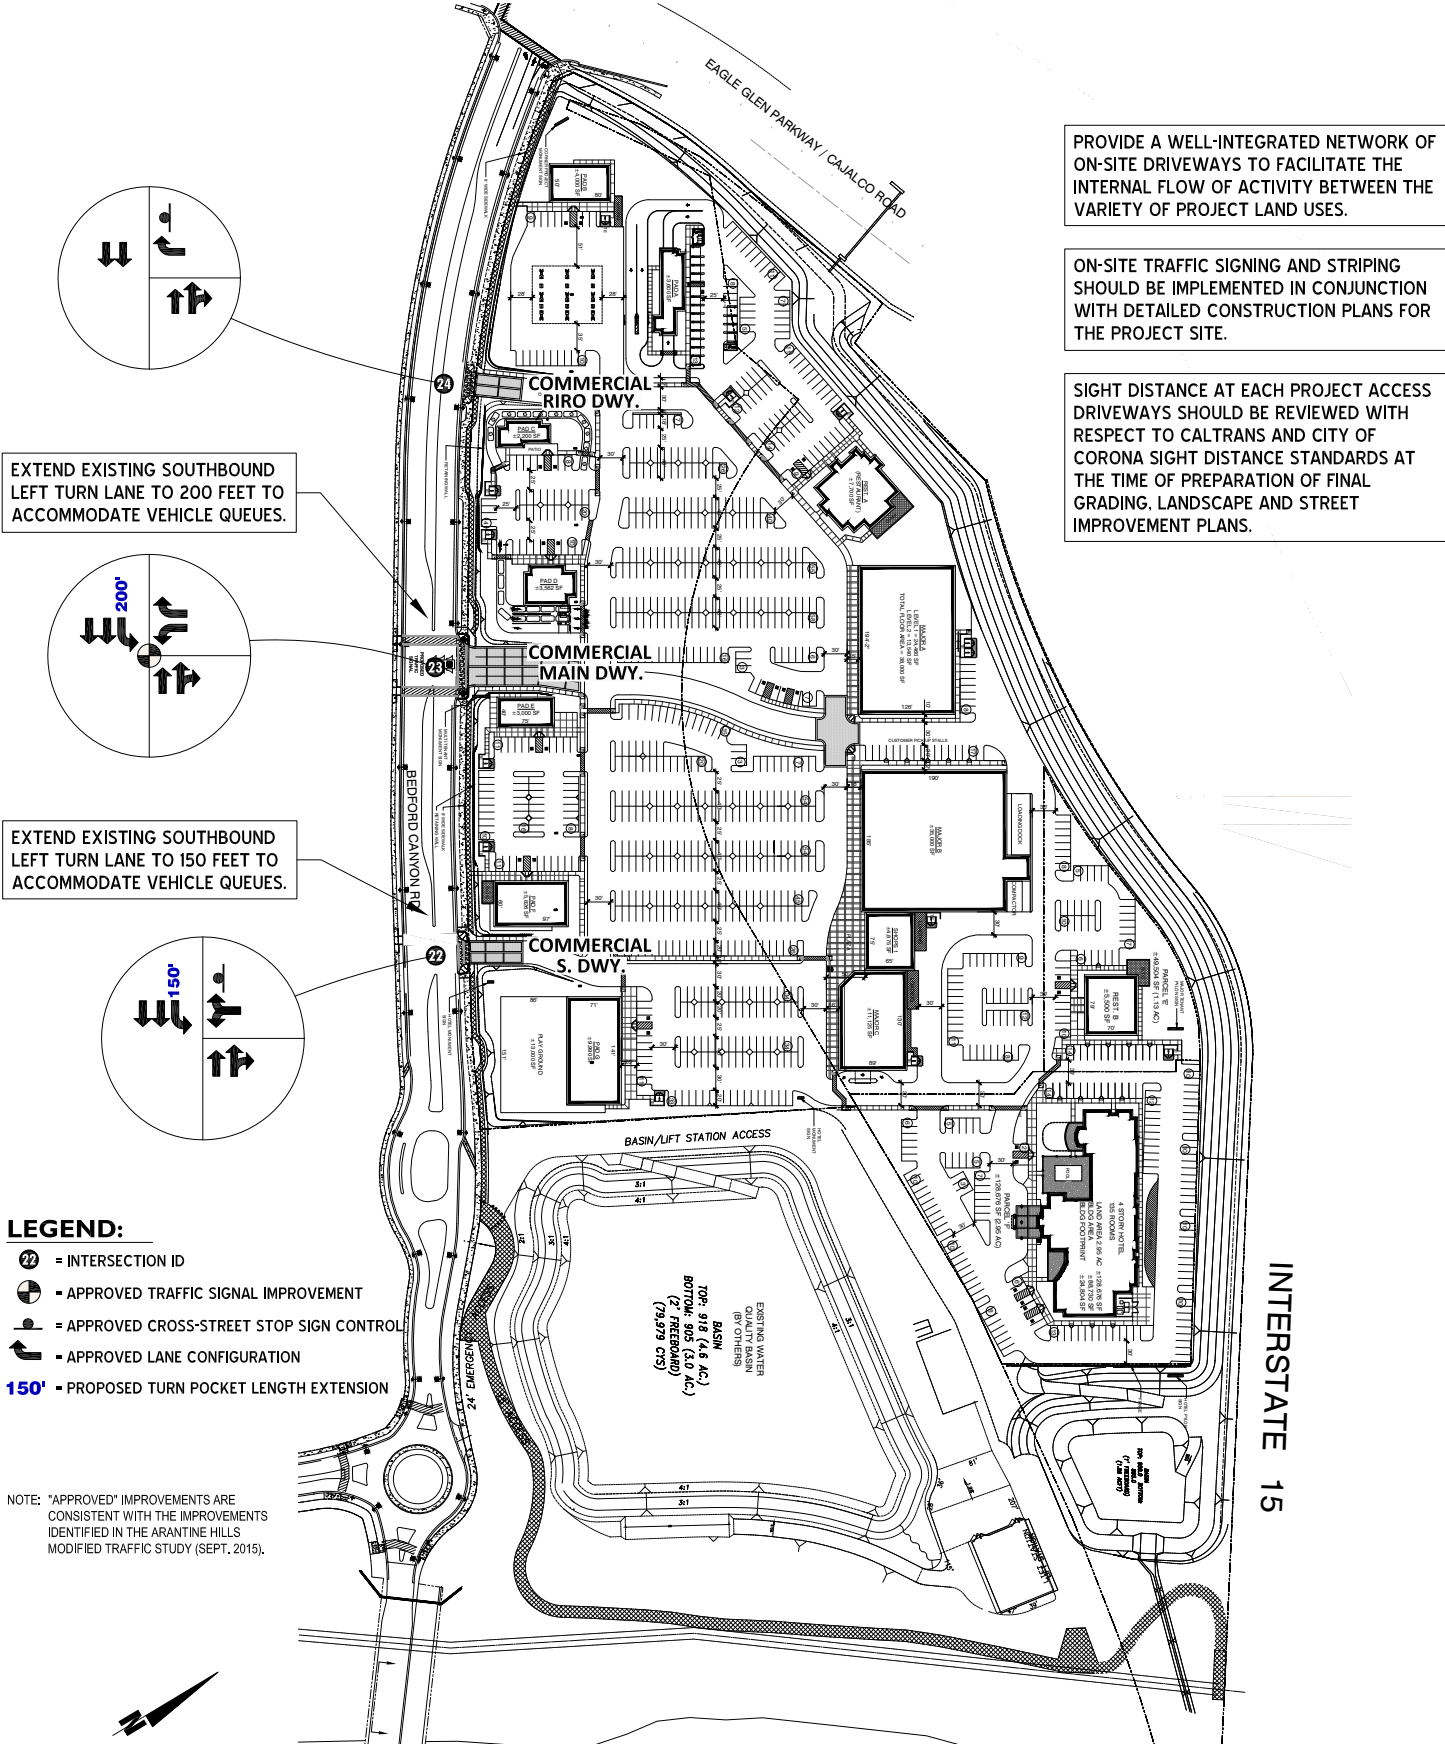

EXHIBIT 3-12: ACCESS IMPROVEMENTS

PROVIDE A WELL-INTEGRATED NETWORK OF ON-SITE DRIVEWAYS TO FACILITATE THE INTERNAL FLOW OF ACTIVITY BETWEEN THE VARIETY OF PROJECT LAND USES.

ON-SITE TRAFFIC SIGNING AND STRIPING SHOULD BE IMPLEMENTED IN CONJUNCTION WITH DETAILED CONSTRUCTION PLANS FOR THE PROJECT SITE.

SIGHT DISTANCE AT EACH PROJECT ACCESS DRIVEWAYS SHOULD BE REVIEWED WITH RESPECT TO CALTRANS AND CITY OF CORONA SIGHT DISTANCE STANDARDS AT THE TIME OF PREPARATION OF FINAL GRADING, LANDSCAPE AND STREET IMPROVEMENT PLANS.

EXTEND EXISTING SOUTHBOUND LEFT TURN LANE TO 200 FEET TO ACCOMMODATE VEHICLE QUEUES.

EXTEND EXISTING SOUTHBOUND LEFT TURN LANE TO 150 FEET TO ACCOMMODATE VEHICLE QUEUES.

LEGEND:

- = INTERSECTION ID
- = APPROVED TRAFFIC SIGNAL IMPROVEMENT
- = APPROVED CROSS-STREET STOP SIGN CONTROL
- = APPROVED LANE CONFIGURATION
- 150'** = PROPOSED TURN POCKET LENGTH EXTENSION

NOTE: "APPROVED" IMPROVEMENTS ARE CONSISTENT WITH THE IMPROVEMENTS IDENTIFIED IN THE ARANTINE HILLS MODIFIED TRAFFIC STUDY (SEPT. 2015).

### 3.4 INTERNAL CIRCULATION

The internal network of driveways and parking aisles shown on Exhibit 3-12 has been refined in response to City of Corona technical comments. The three driveway entries to the site are connected internally by a 30' north/south drive aisle (westerly drive aisle), and movement along this spine driveway is not interrupted by direct access to parking stalls.

At each of the three driveway entries, an uninterrupted travel way is provided between the street and the westerly drive aisle. The central driveway entry (commercial main driveway) accommodates two inbound and two outbound lanes. Entering vehicles which turn left or right at the westerly drive aisle are therefore served by separate travel lanes.

Approximately six vehicles per lane can be stored within each of the inbound and outbound lanes at the three driveway entries to the site without affecting Bedford Canyon Road traffic flows. The design of the site entries and internal drive aisles minimizes conflict points which would interfere with key traffic movements. Each of the three driveway entries extends into the site beyond the westerly drive aisle and connects to other parallel internal driveways.

The central parking lots provide parking spaces suited to travelers who wish to access multiple shops, restaurants, health / fitness club, day care center, and banks. The central parking lots are located east of the westerly drive aisle and west of the central north/south drive aisle which is adjacent to the major retail buildings. Vehicles turn into parking aisles which in turn provide direct access to parking stalls. Parking spaces are also located near Pads A, B, C, D, and E, in addition to the hotel, providing convenient access to these establishments.

Pad C and Pad D are located south of the northerly right in / right out driveway, in an area of the parking lot that is separated from the main parking lot area with two internal drive aisle openings. Entry to the Pad C and Pad D drive-thru aisles is provided by two separate parking aisles from the westerly drive aisle. For Pad D, the exiting drive-thru lanes connect directly to the westerly drive aisle. Parking is also provided in this area for visitors who may decide to park and enter Pad C and Pad D on foot.

This page intentionally left blank.

## 4.0 METHODOLOGIES

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report. The methodologies described are generally consistent with the City of Corona traffic impact study guidelines.

### 4.1 LEVEL OF SERVICE

Traffic operations of roadway facilities are described using the term "Level of Service" (LOS). LOS is a qualitative description of traffic flow based on several factors such as speed, travel time, delay, and freedom to maneuver. Six levels are typically defined ranging from LOS A, representing completely free-flow conditions, to LOS F, representing breakdown in flow resulting in stop-and-go conditions. LOS E represents operations at or near capacity, an unstable level where vehicles are operating with the minimum spacing for maintaining uniform flow.

### 4.2 INTERSECTION CAPACITY ANALYSIS

The definitions of LOS for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The *Highway Capacity Manual* (HCM) methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. The HCM uses different procedures depending on the type of intersection control.

The following peak hours were selected for analysis:

- Weekday AM Peak Hour (peak hour between 7:00 AM and 9:00 AM)
- Weekday PM Peak Hour (peak hour between 4:00 PM and 6:00 PM)

#### 4.2.1 SIGNALIZED INTERSECTIONS

The City of Corona requires signalized intersection operations analysis based on the methodology described in Chapter 18 and Chapter 31 of the HCM 6<sup>th</sup> Edition. Intersection LOS operations are based on an intersection's average control delay. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. For signalized intersections LOS is directly related to the average control delay per vehicle and is correlated to a LOS designation as described in Table 4-1.

Study area intersections have been analyzed using the software package Synchro (Version 10). Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the Chapter 18 of the HCM. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length.

**TABLE 4-1: SIGNALIZED INTERSECTION LOS THRESHOLDS**

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Operations with very low delay occurring with favorable progression and/or short cycle length.	0 to 10.00	A	F
Operations with low delay occurring with good progression and/or short cycle lengths.	10.01 to 20.00	B	F
Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.01 to 35.00	C	F
Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.01 to 55.00	D	F
Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.01 to 80.00	E	F
Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths.	80.01 and up	F	F

Source: HCM 6th Edition

The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network. The LOS analysis for signalized intersections has been performed using optimized signal timing for existing traffic conditions. Signal timing optimization has considered pedestrian safety and signal coordination requirements. Appropriate time for pedestrian crossings has also been considered in the signalized intersection analysis. Signal timing for study area intersections have been requested and utilized. Where signal timing was unavailable, the local accepted standards were utilized in lieu of actual signal timing.

The peak hour traffic volumes have been adjusted using a peak hour factor (PHF) to reflect peak 15 minute volumes. Flow rates are typically expressed in vehicles per hour. The PHF is the relationship between the peak 15-minute flow rate and the full hourly volume (e.g.  $PHF = [Hourly Volume] / [4 \times Peak\ 15\text{-minute\ Flow\ Rate}]$ ). The use of a 15-minute PHF produces a more detailed analysis as compared to analyzing vehicles per hour. Existing PHFs have been used for all analysis scenarios. Per Chapter 4 of the HCM 6<sup>th</sup> Edition (HCM6), PHF values over 0.95 often are indicative of high traffic volumes with capacity constraints on peak hour flows while lower PHF values are indicative of greater variability of flow during the peak hour.

#### 4.2.2 UNSIGNALIZED INTERSECTIONS

The City of Corona requires the operations of unsignalized intersections be evaluated using the methodology described in Chapter 19, Chapter 20, and Chapter 32 of the HCM 6<sup>th</sup> Edition. The LOS rating is based on the weighted average control delay expressed in seconds per vehicle (see Table 4-2).

**TABLE 4-2: UNSIGNALIZED INTERSECTION DESCRIPTION OF LOS**

Description	Average Control Delay Per Vehicle (Seconds)	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Little or no delays.	0 to 10.00	A	F
Short traffic delays.	10.01 to 15.00	B	F
Average traffic delays.	15.01 to 25.00	C	F
Long traffic delays.	25.01 to 35.00	D	F
Very long traffic delays.	35.01 to 50.00	E	F
Extreme traffic delays with intersection capacity exceeded.	> 50.00	F	F

Source: HCM 6<sup>th</sup> Edition

At two-way or side-street stop-controlled intersections, LOS is calculated for each controlled movement and for the left turn movement from the major street, as well as for the intersection as a whole. For approaches composed of a single lane, the delay is computed as the average of all movements in that lane.

To evaluate roundabout intersections, the HCM6 methodology has been utilized. The LOS for roundabouts is based on average vehicle delay and utilizes the same LOS threshold used for unsignalized intersections and previously presented on Table 4-2.

### 4.3 QUEUING ANALYSIS

For the purpose of this analysis and per the City of Corona's request, the 95<sup>th</sup> percentile queuing of vehicles has been assessed along Eagle Glen – Cajalco Road from Bedford Canyon Road to I-5 / Cajalco Interchange, Bedford Canyon Road / Foothill Parkway – El Cerrito Road, and Project Access points on Bedford Canyon Road to determine potential queuing deficiencies.

The traffic progression analysis tool and HCM intersection analysis program, Synchro, has been used to assess the potential deficiencies/needs of the intersections with traffic added from the proposed Project. Storage (turn-pocket) length recommendations have been based upon the 95<sup>th</sup> percentile queue resulting from the Synchro progression analysis. The queue length reported is for the lane with the highest queue in the lane group.

A vehicle is considered queued whenever it is traveling at less than 10 feet/second. A vehicle will only become queued when it is either at the stop bar or behind another queued vehicle. Although only the 95<sup>th</sup> percentile queue has been reported in the tables, the 50<sup>th</sup> percentile queue can be found in the appendix alongside the 95<sup>th</sup> percentile queue for each ramp location. The 50<sup>th</sup> percentile maximum queue is the maximum back of queue on a typical cycle during the peak hour, while the 95<sup>th</sup> percentile queue is the maximum back of queue with 95<sup>th</sup> percentile traffic volumes during the peak hour. In other words, if traffic were observed for 100 cycles, the 95<sup>th</sup> percentile queue would be the queue experienced with the 95<sup>th</sup> busiest cycle (or 5% of the time). The 50<sup>th</sup> percentile or average queue represents the typical queue length for peak hour traffic conditions, while the 95<sup>th</sup> percentile queue is derived from the average queue plus

1.65 standard deviations. The 95<sup>th</sup> percentile queue is not necessarily ever observed, it is simply based on statistical calculations.

#### 4.4 TRAFFIC SIGNAL WARRANT ANALYSIS METHODOLOGY

The term "signal warrants" refers to the list of established criteria used by Caltrans and other public agencies to quantitatively justify or ascertain the potential need for installation of a traffic signal at an otherwise unsignalized intersection. This TIA uses the signal warrant criteria presented in the latest edition of the Federal Highway Administration's (FHWA) *Manual on Uniform Traffic Control Devices (MUTCD)*, as amended by the *MUTCD 2012 California Supplement*, for all study area intersections.

The signal warrant criteria for Existing conditions are based upon several factors, including volume of vehicular and pedestrian traffic, frequency of accidents, and location of school areas. Both the FHWA's *MUTCD* and the *MUTCD 2012 California Supplement* indicate that the installation of a traffic signal should be considered if one or more of the signal warrants are met. Specifically, this TIA utilizes the Peak Hour Volume-based Warrant 3 as the appropriate representative traffic signal warrant analysis for existing traffic conditions. Warrant 3 criteria are basically identical for both the FHWA's *MUTCD* and the *MUTCD 2012 California Supplement*. Warrant 3 is appropriate to use for this TIA because it provides specialized warrant criteria for intersections with rural characteristics (e.g. located in communities with populations of less than 10,000 persons or with adjacent major streets operating above 40 miles per hour). For the purposes of this study, the speed limit was the basis for determining whether Urban or Rural warrants were used for a given intersection. It should be noted that Rural warrants have been utilized along Masters Drive and Bedford Canyon Road.

Future intersections that do not currently exist have been assessed regarding the potential need for new traffic signals based on future average daily traffic (ADT) volumes, using the Caltrans planning level ADT-based signal warrant analysis worksheets.

Traffic signal warrant analyses were performed for the unsignalized study area intersections listed in Table 4-3.

**TABLE 4-3: TRAFFIC SIGNAL WARRANT ANALYSIS LOCATIONS**

ID	Intersection Location	Jurisdiction
1	Masters Drive / California Avenue	Corona
2	Masters Drive / Bennett Avenue	Corona
5	Bedford Canyon Road / Georgetown Drive	Corona
18	Masters Drive / Christopher Lane	Corona
19	Via Castilla Street / Masters Drive	Corona
20	Morales Way / Masters Drive	Corona
22	Bedford Canyon Road / Commercial South Driveway – <i>Future Intersection</i>	Corona
23	Bedford Canyon Road / Commercial Main Driveway – <i>Future Intersection</i>	Corona

The Existing (2017 and 2018) conditions traffic signal warrant analysis is presented previously in Section 2.5. The traffic signal warrant analysis for future conditions are presented in Section 5.0 *Interim Year (2021) Traffic Analysis*, and Section 6.0 *Horizon Year 2035 Traffic Analysis* of this report.

It is important to note that a signal warrant defines the minimum condition under which the installation of a traffic signal might be warranted. Meeting this threshold condition does not require that a traffic control signal be installed at a particular location, but rather, that other traffic factors and conditions be evaluated in order to determine whether the signal is truly justified. It should also be noted that signal warrants do not necessarily correlate with LOS. An intersection may satisfy a signal warrant condition and operate at or above acceptable LOS or operate below acceptable LOS and not meet a signal warrant.

#### 4.5 LOS CRITERIA

In accordance with the City of Corona General Plan, the following intersection LOS thresholds from the General Plan are to be implemented:

- LOS C or better shall be maintained for local intersections in residential/industrial areas.
- LOS D or better shall be maintained on collector and arterial intersections.
- Consistent with the previously approved Arantine Hills Traffic Impact Analysis (2015) and Arantine Hills Specific Plan Amendment No.2 Traffic Assessment (November 2018), LOS "E" is anticipated to be permitted for the ramp intersections at the I-15 / Cajalco Road interchange.

The City of Corona LOS criteria for the study area intersections are listed below:

ID	Intersection	LOS Criteria
1	Masters Drive / California Avenue	C
2	Masters Drive / Bennett Avenue	C
3	Masters Drive / Eagle Glen Parkway	D
4	Bedford Canyon Road / El Cerrito Road	D
5	Bedford Canyon Road / Georgetown Drive	C
6	Bedford Canyon Road / Eagle Glen Parkway	D
7	I-15 SB Ramps / El Cerrito Road	D
8	I-15 SB Ramps / Cajalco Road	E
9	I-15 NB Ramps / El Cerrito Road	D
10	I-15 NB Ramps / Cajalco Road	E
11	Grand Oaks / Cajalco Road	D
12	Temescal Canyon Road / Cajalco Road	D
13	Clementine Way / Eagle Glen Parkway	D
14	Clementine Way / Hudson House Drive	C
15	Bedford Canyon Road / Hudson House Drive	C
18	Masters Drive / Christopher Lane	C
19	Via Castilla Street / Masters Drive	C

ID	Intersection (Continued)	LOS Criteria
20	Morales Way / Masters Drive	C
22	Bedford Canyon Road / Commercial RIRO Driveway	C
23	Bedford Canyon Road / Commercial Main Driveway	C
24	Bedford Canyon Road / Commercial South Driveway	C

The Arantine Hills Project Traffic Study provides the mitigation measures needed to satisfy the minimum level of service thresholds defined by the City of Corona. This is consistent with the Caltrans Guide for the preparation of Traffic Impact Studies that states “Caltrans endeavors to maintain a target LOS at the transition between LOS C and LOS D on State highway facilities”. However, it should be noted that Caltrans acknowledges that maintaining these levels of service thresholds may not always be feasible and recommends the lead agency consult with Caltrans to determine the appropriate target level of service. If an existing facility is operating at less than the appropriate target LOS, the existing LOS should be maintained.

## 5.0 INTERIM YEAR (2021) TRAFFIC ANALYSIS

This section discusses the methods used to develop Interim Year (2021) without and with Project traffic conditions and the resulting intersection operations.

### 5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed for Interim Year (2021) Conditions are as follows:

- Bedford Marketplace driveways and those facilities assumed to be constructed as part of the Bedford Marketplace to provide site access are assumed to be in place for With Project conditions only (e.g., intersection and roadway improvements at the Project's frontage and driveways).

Planned improvements (currently under construction) at or near the Cajalco Road/I-15 interchange area include the following:

- Widen Cajalco Road from a 2-lane divided roadway to a 4-lane divided roadway, between Bedford Canyon Road and I-15 SB Ramps.
- Widen Cajalco Road from a 2-lane divided roadway to a 6-lane divided roadway, between the I-15 SB and I-15 NB ramps.
- Widen Cajalco Road from a 5-lane divided roadway to a 6-lane divided roadway, between the I-15 NB ramps Temescal Canyon Road.

The unsignalized intersection of Masters Drive / Eagle Glen Parkway (#3) and future intersection of Clementine Way / Eagle Glen Parkway (#13) under existing conditions are evaluated with traffic signal control for Interim Year (2021) conditions. These traffic signal improvements were recently installed after existing (2017/2018) counts were taken.

### 5.2 INTERIM YEAR (2021) TRAFFIC VOLUME FORECASTS

To account for ambient growth on area roadways, future 2021 traffic volumes have been estimated based on an annual growth of 2% per year (total of 8% growth for 4 years). In addition, the approved Arantine Hills Project traffic is also included as background traffic for 2021 conditions.

The Interim Year (2021) Without Project conditions peak hour intersection turning movement volumes were shown previously on Exhibits 3-4 and 3-5. The 2021 With Project conditions peak hour intersection turning movement volumes were shown previously on Exhibits 3-6 and 3-7.

### 5.3 INTERSECTION OPERATIONS ANALYSIS AND RECOMMENDED IMPROVEMENTS

Table 5-1 provides an overall summary of intersection operations in the study area with Interim Year (2021) without and with Project conditions.

**TABLE 5-1: INTERSECTION ANALYSIS SUMMARY FOR INTERIM YEAR (2021) CONDITIONS**

#	Intersection	Traffic Control <sup>3</sup>	Intersection Approach Lanes <sup>1</sup>												2021 Without Project				2021 With Project				LOS Criteria

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; d = Defacto Right Turn Lane; 1! = Shared Left-Through-Right turn lane; > = Right Turn Overlap; >> = Free-Right;

1 = Recently Completed Improvement; 1 = Lane reduction/configuration during interchange construction; 1 = Improvement; 1 = Planned Interchange Improvement

<sup>2</sup> Per the Highway Capacity Manual 6th Edition (HCM6), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control.

For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

Delay and level of service is calculated using Synchro 10.1 analysis software.

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>3</sup> TS = Traffic Signal; CSS = Cross-street Stop; AWS = All-Way Stop; RDB = Roundabout

<sup>4</sup> Per City of Corona staff, a 3rd EBT lane is recommended.

<sup>5</sup> Source: Arantine Hills Specific Plan Amendment No.2 Traffic Assessment (November 2018). Prepared by Urban Crossroads, Inc.

<sup>6</sup> Source: Arantine Hills Modified Project Traffic Study (September 2015). Prepared by Urban Crossroads, Inc.

The Interim Year (2021) Without Project conditions intersection operations analysis worksheets are provided in Appendix “5.1”. The 2021 With Project conditions intersection operations analysis worksheets are provided in Appendix “5.2”.

For Interim Year (2021) Without Project and With Project scenarios, LOS deficiencies occur at the following intersections:

ID	Intersection Location	Jurisdiction
1	Masters Drive / California Avenue	Corona
6	Bedford Canyon Road / Eagle Glen Parkway	Corona
8	I-15 SB Ramps / Cajalco Road	Caltrans
10	I-15 NB Ramps / Cajalco Road	Caltrans
11	Grand Oaks / Cajalco Road	Corona
18	Masters Drive / Christopher Lane	Corona
19	Via Castilla Street / Masters Drive	Corona
20	Morales Way / Masters Drive	Corona

With the recommended intersection improvements listed below, the deficient intersections identified under Interim Year (2021) Without Project conditions are projected to operate at acceptable level of service during both AM and PM peak hours. Planned improvements (see Caltrans improvement plans in Appendix 1.2) at or near the Cajalco Road / I-15 Interchange area are also included below.

***Masters Drive / California Drive (#1)***

- Install a traffic signal.

***Bedford Canyon Road / Eagle Glen Parkway - Cajalco Road (#6) – Under Construction***

- Traffic Signal Modification.
- Adjust the east leg striping to provide a 2nd receiving lane.
- NB Approach: Construct one left turn lane, one through lane, and one-right turn lane.
- SB Approach: Modify striping to provide a new shared left/through lane.
- EB Approach: Modify striping to provide a new shared through/right turn lane.
- WB Approach: Construct 2 left turn lanes.

***I-15 SB Ramps / Cajalco Road (#8) – Under Construction***

- SB Approach: Construct a 2<sup>nd</sup> left turn lane and 2<sup>nd</sup> right turn lane.
- EB Approach: Construct a 2<sup>nd</sup> left turn lane, 2<sup>nd</sup> through lane, and 3<sup>rd</sup> through lane.
- WB Approach: Construct a 2<sup>nd</sup> through lane

***I-15 NB Ramps / Cajalco Road (#10) – Under Construction***

- NB Approach: Construct a 2<sup>nd</sup> left turn lane and 2<sup>nd</sup> right turn lane.
- EB Approach: Construct a 2<sup>nd</sup> and 3<sup>rd</sup> through lanes and one right turn lane with overlap phasing.
- WB Approach: Construct a 2<sup>nd</sup> and 3<sup>rd</sup> through lanes.

***Grand Oaks / Cajalco Road (#11) – Under Construction***

- EB Approach: Construct a 3<sup>rd</sup> through lane.

***Bedford Canyon Road / Hudson House Drive (#15)***

- Install roundabout.
- NB Approach: Provide a shared left/through lane.
- SB Approach: Provide a shared through/right turn lane.
- EB Approach: Provide a shared left/right turn lane.

***Masters Drive / Christopher Lane (#18)***

- Provide traffic signal, or small roundabout (within existing right-of-way).

***Via Castilla Street / Masters Drive (#19)***

- Convert to cross-street stop control on Via Castilla Street (in conjunction with Masters Drive / Christopher Lane and Morales Way / Masters Drive traffic signals), or construct a roundabout (within existing right-of-way).

***Morales Way / Masters Drive (#20)***

- Install a traffic signal, or construct a roundabout (within existing right-of-way).

***Bedford Canyon Road / Commercial South Driveway (#22)***

- Install a stop sign control for the westbound approach.
- NB Approach: Provide one through lane and one shared through/right lane.
- SB Approach: Provide a left turn (minimum 150 ft.) lane and two through lanes.
- WB Approach: Provide a shared left/right turn lane.

***Bedford Canyon Road / Commercial Main Driveway (#23)***

- Install a traffic signal.
- NB Approach: Provide one through lane and one shared through/right lane.
- SB Approach: Provide a left turn (minimum 200 ft.) lane and two through lanes.
- WB Approach: Provide one left turn lane and one right turn lane.

### **Bedford Canyon Road / Commercial RIRO Driveway (#24)**

- Install a stop sign control for the westbound approach.
- Restrict intersection to right-in/right-out access only
- NB Approach: Provide one through lane and one shared through/right lane.
- SB Approach: Provide two through lanes.
- WB Approach: Provide one right turn lane.

For Interim Year (2021) With Project Conditions, the Project does not generate impacts that require new improvements beyond the improvements identified under Interim Year (2021) Without Project conditions.

## **5.4 QUEUING ANALYSIS**

A queuing analysis was performed for With Project Conditions to assess the adequacy of turn bay lengths to accommodate vehicle queues at the Bedford Marketplace entries and nearby interchange area (including Eagle Glen Parkway – Cajalco Road between Bedford Canyon Road and I-15 Ramps, Bedford Canyon Road / Foothill Parkway - El Cerrito Road). The simulation and optimization traffic modeling tools Synchro and SimTraffic were utilized to perform this evaluation of traffic flows and vehicle queuing. Synchro is a macroscopic analysis and optimization program, and SimTraffic performs microsimulations and animation of vehicle traffic. The SimTraffic analysis includes the effects of nearby intersections on arrival time at an intersection, during the AM and PM peak periods.

In SimTraffic, each vehicle in the traffic system is individually tracked and operational measures of effectiveness are collected on every vehicle during each 10th of a second of simulation. Driver behavior characteristics (ranging from passive to aggressive) are assigned to each vehicle by the model, affecting the vehicle's free-flow speed, queue discharge headways, and other behavioral attributes. The variation in each vehicle's behavior is simulated in a manner reflecting real-world operations.

The queue length reported for each movement in SimTraffic is responsive to the turn pocket length, just like in the real world. SimTraffic simply observes the actual queue activity as it unfolds during the peak hour. Any spillover from the left turn pocket would be reported in the adjacent lane queue length. The random simulations generated by SimTraffic have been utilized to determine the 95th percentile queue lengths observed for each turn lane.

The estimated turn lane storage length requirements for the Project entries and nearby interchange area for Interim Year (2021) with Project traffic conditions are summarized in Table 5-2. These lengths are based on the volumes presented in Chapter 3, and queue length worksheets are included in Appendix 5.2.

TABLE 5-2: INTERIM YEAR (2021) WITH PROJECT CONDITIONS LANE STORAGE LENGTHS

ID	Intersection	Turning Movement Lane	# of Lanes	2035 With Project				Storage Length <sup>2</sup> (ft.)	95th Percentile Queue Length <sup>1</sup>

22	Bedford Cyn. Rd. / Commercial S. Dwy.	SBL	1	76	184	PM	184	<u>150</u>	55	91
23	Bedford Cyn. Rd. / Commercial Main Dwy.	SBL	1	174	281	PM	281	<u>200</u>	172	175

<sup>1</sup> Queue length calculated using SimTraffic.

<sup>2</sup> Existing/Proposed length of storage. Existing = 100; Proposed = **100**

<sup>3</sup> Review of SimTraffic simulation results indicate that the turn lane queue is anticipated to clear in a timely manner and that the provided pocket length is adequate.

R:\UXRjobs\12100-12500\12554\Excel\12554 - Report.xlsx\2-1

## 5.5 TRAFFIC SIGNAL WARRANT ANALYSIS

For Interim Year (2021) Without Project Conditions, the intersection of Bedford Canyon Road / Commercial Main Driveway (#23) is anticipated to meet traffic signal warrants in addition to the intersection previously identified under Existing conditions.

For Interim Year (2021) With Project traffic conditions, there are no new unsignalized intersections anticipated to meet traffic signal warrants, in addition to the intersections identified under Interim Year (2021) without Project conditions.

The 2021 Without and With Project traffic signal warrant analysis worksheets are provided in Appendix "5.3". For 2021 conditions without the Project, the intersection of Bedford Canyon Road / Commercial Main Driveway (#23) is anticipated to meet traffic signal warrants (in addition to the intersection previously identified under Existing conditions).

## 6.0 HORIZON YEAR 2035 TRAFFIC ANALYSIS

### 6.1 HORIZON YEAR 2035 TRAFFIC VOLUME FORECASTS

The Horizon Year 2035 volumes from Arantine Hills Specific Plan Amendment No. 2 Traffic Assessment (November 2018) have been utilized in this report to represent “Without Project” conditions.

The Horizon Year 2035 Without Project Conditions peak hour intersection turning movement volumes were shown previously on Exhibits 3-8 and 3-9.

The Horizon Year 2035 With Project Conditions peak hour intersection turning movement volumes were shown previously on Exhibits 3-10 and 3-11.

### 6.2 INTERSECTION OPERATIONS ANALYSIS AND RECOMMENDED IMPROVEMENTS

Table 6-1 provides an overall summary of intersection operations in the study area with 2035 Without Project and With Project conditions.

The Horizon Year 2035 Without Project Conditions intersection operations analysis worksheets are provided in Appendix “6.1”. The Horizon Year 2035 With Project Conditions intersection operations analysis worksheets are provided in Appendix “6.2”.

For Horizon Year 2035 Without Project Conditions, the following intersections are anticipated to operate at unacceptable level of service, with planned improvements at or near the Cajalco Road / I-15 interchange area:

ID	Intersection Location	Jurisdiction
1	Masters Drive / California Avenue	Corona
2	Masters Drive / Bennett Avenue	Corona
5	Bedford Canyon Road / Eagle Glen Parkway	Corona
7	I-15 SB Ramps / El Cerrito Road	Caltrans
12	Temescal Canyon Road / Cajalco Road	Corona
18	Masters Drive / Christopher Lane	Corona
19	Via Castilla Street / Masters Drive	Corona
20	Morales Way / Masters Drive	Corona

For Horizon Year 2035 With Project Conditions, there are no new intersections anticipated to operate at deficient level of service, beyond the intersections previously identified under Horizon Year 2035 Without Project Conditions. Project driveways and those facilities to be constructed by Bedford Marketplace to provide site access are assumed to be in place for With Project conditions (e.g., intersection and roadway improvements at the Project’s frontage and driveways).

TABLE 6-1: INTERSECTION ANALYSIS SUMMARY FOR HORIZON YEAR 2035 CONDITIONS

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; d = Defacto Right Turn Lane; 1! = Shared Left-Through-Right turn lane; > = Right Turn Overlap; >> = Free-Right;

**1** = Recently Completed Improvement; **1** = Improvement; **1** = Planned Interchange Improvement

<sup>2</sup> Per the Highway Capacity Manual 6th Edition (HCM6), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control.

For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

Delay and level of service is calculated using Synchro 10.1 analysis software.

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>3</sup> TS = Traffic Signal; CSS = Cross-street Stop; AWS = All-Way Stop; RDB = Roundabout

<sup>4</sup> Per City of Corona staff, a 3rd EBT lane is recommended.

<sup>6</sup> Source: Arantine Hills Modified Project Traffic Study (September 2015). Prepared by Urban Crossroads, Inc.

R:\UXRjobs\12100-12500\12554\Excel\12554 - Report.xlsx\6-1

With the recommended intersection improvements listed below (in addition to the previously identified improvements under Interim Year (2021) Without Project conditions), the deficient intersections identified under Horizon Year 2035 Without Project Conditions are projected to operate at acceptable level of service during both AM and PM peak hours.

***I-15 SB Ramps / El Cerrito Road (#7)***

- EB Approach: Construct a separate right turn lane

***Temescal Canyon Road / Cajalco Road (#12)***

- Widen Cajalco Road from four-lane divided to six-lane divided roadway, east of Temescal Canyon Road.
- SB Approach: Modify striping to provide a 2<sup>nd</sup> left turn lane, in addition to the existing two through lanes.
- EB Approach: Modify striping to provide a 2<sup>nd</sup> through lane, in addition to the existing left turn lane and right turn lane.
- WB Approach: Construct one right turn lane.

Traffic signal improvements are also recommended at the following intersections without the Project based on the traffic signal warrant results discussed in section 6.4:

***Masters Drive / Bennett Avenue (#2)***

- Install a traffic signal.

***Bedford Canyon Road / Georgetown Drive (#5)***

- Install a traffic signal.

For Horizon Year 2035 With Project Conditions, the Project does not generate impacts that require new improvements beyond the improvements identified under Horizon Year 2035 Without Project conditions.

### **6.3 QUEUING ANALYSIS**

A queuing analysis was performed for With Project Conditions to assess the adequacy of turn bay lengths to accommodate vehicle queues at the Bedford Marketplace entries and nearby interchange area (including Eagle Glen Parkway – Cajalco Road between Bedford Canyon Road and I-15 Ramps, Bedford Canyon Road / Foothill Parkway - El Cerrito Road). The simulation and optimization traffic modeling tools Synchro and SimTraffic were utilized to perform this evaluation of traffic flows and vehicle queuing. Synchro is a macroscopic analysis and optimization program, and SimTraffic performs microsimulations and animation of vehicle traffic. The SimTraffic analysis includes the effects of nearby intersections on arrival time at an intersection, during the AM and PM peak periods.

In SimTraffic, each vehicle in the traffic system is individually tracked and operational measures of effectiveness are collected on every vehicle during each 10th of a second of simulation. Driver behavior characteristics (ranging from passive to aggressive) are assigned to each vehicle by the model, affecting the vehicle's free-flow speed, queue discharge headways, and other behavioral attributes. The variation in each vehicle's behavior is simulated in a manner reflecting real-world operations.

The queue length reported for each movement in SimTraffic is responsive to the turn pocket length, just like in the real world. SimTraffic simply observes the actual queue activity as it unfolds during the peak hour. Any spillover from the left turn pocket would be reported in the adjacent lane queue length. The random simulations generated by SimTraffic have been utilized to determine the 95th percentile queue lengths observed for each turn lane.

The estimated turn lane storage length requirements for the Project entries and nearby interchange area for Horizon Year 2035 with Project traffic conditions are summarized in Table 6-2. These lengths are based on the volumes presented in Chapter 3, and queue length worksheets are included in Appendix 6.2.

#### 6.4 TRAFFIC SIGNAL WARRANT ANALYSIS

For Horizon Year 2035 Without Project Conditions, the following intersections are anticipated to meet traffic signal warrants, in addition to the intersections identified previously under Interim Year (2021) conditions:

ID	Intersection Location	Jurisdiction
2	Masters Drive / Bennett Avenue	Corona
5	Bedford Canyon Road / Georgetown Drive	Corona

For Horizon Year 2035 With Project Conditions, there are no new intersections anticipated to meet traffic signal warrants, in addition to the intersections identified previously under 2035 Without Project conditions.

The 2035 Without Project and With Project traffic signal warrant analysis worksheets are provided in Appendix "6.3".

TABLE 6-2: HORIZON YEAR 2035 WITH PROJECT CONDITIONS LANE STORAGE LENGTHS

ID	Intersection	Turning Movement Lane	# of Lanes	2035 With Project				Storage Length <sup>2</sup> (ft.)	95th Percentile Queue Length <sup>1</sup>	
				AM	PM	Peak Hour	Volume		AM	PM

10	I-15 NB Ramps / Cajalco Rd.	EBR	1	923	631	AM	923	<u>340</u>	111	73
22	Bedford Cyn. Rd. / Commercial S. Dwy.	SBL	1	76	184	PM	184	<u>150</u>	60	57
23	Bedford Cyn. Rd. / Commercial Main Dwy.	SBL	1	174	281	PM	281	<u>200</u>	180	195

<sup>1</sup> Queue length calculated using SimTraffic.

<sup>2</sup> Existing/Proposed length of storage. Existing = 100; Proposed = 100

<sup>3</sup> Review of SimTraffic simulation results indicate that the turn lane queue is anticipated to clear in a timely manner and that the provided pocket length is adequate.

R:\UXRjobs\12100-12500\12554\Excel\12554 - Report.xlsx\2-1

## 7.0 VEHICLE MILES TRAVELED (VMT)

The California Environmental Quality Act (CEQA) procedures for determination of transportation impacts have recently changed to an evaluation of Vehicle Miles Traveled (VMT) rather than vehicle delay or level of service, due to Senate Bill 743 (SB 743). The City of Corona VMT Analysis Guidelines provide a structure for evaluating VMT on a project level basis. Vehicle delay and level of service are still used in Corona traffic studies, as presented in earlier sections of this traffic study.

### 7.1 CORONA VMT ANALYSIS GUIDELINES

The Corona VMT Analysis Guidelines (Fehr & Peers, January 2019) recommend a VMT assessment procedure that is consistent with the Western Regional Council of Governments (WRCOG). Projects are first screened to determine if a VMT analysis is required. If a Project has the potential to reduce VMT/SP, a VMT impact is not anticipated.

Consistency with the SCAG RTP/SCS is reviewed, and an analysis is necessary if the Project is inconsistent with the RTP/SCS. The Project area is screened to determine if it is in a Transit Priority Area or High Quality Transit Corridor. Local serving retail Projects of less than 50,000 square feet and neighborhood schools are not anticipated to cause VMT impacts. Projects in low VMT-generating TAZs may not require VMT analysis.

Per the Corona General Plan VMT Assessment, Corona residents on average travel 30 VMT per weekday. Projects that are consistent with the General Plan can tier off the General Plan EIR and therefore do not require VMT analysis.

Based upon the WRCOG VMT Screening Tool, the Project is located within a Low VMT generating TAZ. The total VMT per service population for the TAZ is estimated by WRCOG at 27.78 in comparison to the jurisdictional average of 30.52.

VMT is calculated via the City of Corona traffic model, then compared to Service Population (SP), which consists of Population and Employment. Project VMT is considered a significant impact if the Project generates VMT/SP above the Citywide VMT/SP.

Although the Project is located within a Low VMT generating TAZ, the Project TAZ VMT was extracted from the Corona General Plan traffic model for information purposes. The service population in the TAZ that contains the Project is 6,073 residents and employees. The VMT / service population is approximately 26.6 VMT/SP, which is less than the City of Corona average of approximately 30 VMT/SP.

### 7.2 PROJECT DESIGN FEATURES

The Project is part of the Arantine Hills Specific Plan, with connectivity and mix of uses providing opportunities for on-site interaction, such as restaurant to hotel, hotel to gas station, residential to child care, etc. The Project incorporates the following strategies to reduce automobile trips and the distance traveled per service population:

1. Increase diversity of land uses - This strategy focuses on inclusion of mixed uses within the project and in consideration of the surrounding area to minimize vehicle travel in terms of both the number of auto trips and the length of those trips. By providing a healthy mix of hotel, restaurant, retail, and day care near one another and the surrounding Arantine Hills Specific Plan residential uses, typical “isolated use” travel characteristics are estimated to be reduced by at least nine percent. An increase in diversity of suburban development can reduce VMT within a single development by as much as 12%.
2. Provide pedestrian network improvements - This strategy focuses on creating pedestrian accommodations within the project and connecting to nearby destinations. The backbone plan of pathways and bike routes for Arantine Hills provides an integrated sidewalk and trails system that conveniently links the Bedford Marketplace site to community facilities, residential neighborhoods, and parks. The VMT reduction due to the provision of a complete pedestrian network is up to 5.7%.
3. Provide traffic calming measures and low-stress bicycle network improvements - Multi-purpose trails (Off road paved trails for pedestrians and bicyclist) are located on the north side of Bedford Canyon Road, the east side of Hudson House Drive, and the south side of Clementine Way where public uses can be conveniently accessed by both visitors and residents. This design approach safely accommodates travel by those bicycling in a traditional manner, as well as e-bikes (and e-scooters) which extend the effective range of travel on the bicycle network and enhance the effectiveness of this strategy. Providing accommodations for bicycle facilities results in a potential VMT reduction of 1.7%.

### **7.3 PROJECT EMPLOYMENT AND VMT ESTIMATES**

Project employment information was provided by the Client and is provided in Appendix “7.1”. Approximately 582 jobs (including 240 temporary and 342 permanent positions) are anticipated for Bedford Marketplace. The previous approval consists of approximately 80,000 square feet of retail, which accounts for approximately 320 employees (based upon an average of 4 employees per tsf of gross floor area).

Therefore, an increase of approximately 262 jobs will occur with the Project.

The Project mix of land uses (including hotel, retail, and service-oriented uses) is anticipated to encourage trip capture on-site, resulting in a lower than usual VMT. The combination of banking, restaurant, gas, health club, retail, and a day care center in close proximity to residential and hotel uses is expected to capture trips within and near to the site.

As noted above, pathways and bike routes associated with the site provide an integrated sidewalk and trails system that conveniently links the Bedford Marketplace site to community facilities, residential neighborhoods, and parks. The Project is located within a Low VMT generating TAZ, with a VMT / service population between 26.6 and 27.8 VMT/SP, which is less than the City of Corona average of approximately 30 VMT/SP.

The VMT / SP associated with the Project could potentially fall within the range of approximately 26.6 to 31.5, but the Project location, mix of uses, and effectiveness of the

design features support a conservative estimate of 29 VMT / SP. The resulting total Project VMT is approximately 7,598 annual vehicle miles traveled for the 262 employees added by the Project, which is less than the City average per SP and considered a less than significant impact based upon City criteria.

This page intentionally left blank.

## 8.0 FINDINGS AND CONCLUSIONS

This study assesses the traffic circulation of the proposed Bedford Marketplace which is an expansion of commercial development area adjacent to Arantine Hills. The conclusions and recommendations are summarized below.

- Based on the currently approved commercial trip generation in the Arantine Hills Traffic Assessment (November 2018), the Project is anticipated to generate an additional 2,061 external trips per day with 281 AM peak hour external trips and 285 PM peak hour external trips.
- For Interim Year (2021) conditions, the improvements under construction at or near the Cajalco Road / I-15 Interchange area are assumed to be completed. No additional off-site intersections are anticipated to operate at unacceptable level of service, beyond those intersections previously identified under existing conditions with traffic generated by the Project.
- For Horizon Year 2035 With Project Conditions, there are no new intersections anticipated to operate at deficient level of service, beyond the intersections identified under Without Project Conditions.
- Access in and out of Bedford Marketplace occurs at three existing driveways along Bedford Canyon Road south of Eagle Glen Parkway/Cajalco Road. The northerly driveway is limited to right-in right-out (RIRO) conditions, without an opening of the median on Bedford Canyon Road. It serves as a convenient exit for vehicles leaving the Gas Station and Automated Car Wash, bound for Eagle Glen Parkway/Cajalco Road. The RIRO driveway also accommodates entering vehicles from northbound on Bedford Canyon Road.
- The main Bedford Marketplace driveway is located at a mid-point along the site frontage to Bedford Canyon Road. It is a full access location, serving left and right turns to and from Bedford Canyon Road with traffic signal control. With expansion of commercial uses at the Project site, the existing southbound left turn lane serving the main Bedford Marketplace driveway is recommended to be extended to provide 200 feet of vehicle queuing.
- The southerly Bedford Marketplace driveway is also a full access location, serving left and right turns to and from Bedford Canyon Road with cross-street stop sign control of the exiting vehicles. At this location, the existing southbound left turn lane is recommended to be extended to provide 150 feet of vehicle queuing with the expansion of commercial uses at the Project site.
- An efficient network of on-site driveways provides connectivity to all access points and facilitates the internal flow of activity between the variety of Project land uses.
- The Project mix of land uses (including hotel, retail, and service-oriented uses) is anticipated to encourage trip capture on-site, resulting in a lower than usual VMT per

service population (SP). The Project is also located within a Low VMT generating traffic analysis zone (TAZ), with a VMT / service population between 26.6 and 27.8 VMT/SP.

- o The VMT / SP associated with the Project could potentially fall within the range of approximately 26.6 to 31.5, but the Project location, mix of uses, and effectiveness of the design features support a conservative estimate of 29 VMT / SP. The resulting total Project VMT is approximately 7,598 for the 262 employees added by the project, which is less than the City average per SP and considered a less than significant impact based upon City criteria.

## 8.1 PROJECT FAIR SHARE CALCULATIONS

The project proponent shall participate in the City of Corona Development Impact Fee Program and the Western Riverside Council of Governments Transportation Uniform Mitigation Fee Program, with appropriate credits for overlapping participation in off-site improvements (to be determined by the City of Corona).

The City of Corona Traffic Impact Study Guidelines provide a formula for estimating the project fair share percentages based on average intersection delay. The percentage of fair share for the project shall be calculated at each location as the ratio of the increase in delay from project trips divided by the difference between total delay (including) and delay at acceptable Level of Service. In addition, for non-master planned facilities where there is no reasonable expectation that future development will significantly impact the facility, the project will be responsible for 100% of the mitigation cost and “fair share” will not apply. The following equation is used to calculate the project fair share percentage:

$$\text{Project Fair Share \%} = \frac{\text{Project Only Delay}}{(\text{Total Delay "with project" - Max Acceptable Delay Traffic})}$$

The volume-based share calculation results are based on both the project percentage of total traffic (Project Only Traffic / Horizon Year With Project Traffic) and project percentage of new traffic (Project Only Traffic / Total New Traffic). Table 8-1 present the Project peak hour fair share calculations using this procedure.

Study area intersection improvement measures for each analysis scenario are shown on Exhibit 8-1. This summary exhibit provides an overview of intersection geometrics by scenario / timeframe. Exhibit 8-1 identifies improvements that would allow the study intersections to operate at acceptable levels of service with the project and with cumulative growth, in addition to improvements for the new project access connections. The proposed Bedford Canyon Road median design with Project left turn pockets is illustrated on Exhibit 8-2.

1 Approved Project Fair Share Source: Arantine Hills Modified Project Traffic Study (September 2015). Prepared by Urban Crossroads, Inc.  
 2 Project Delay Source: Bedford Marketplace Traffic Study (September 2019). Prepared by Urban Crossroads, Inc.  
 3 Study area intersection Level of Service threshold as presented in Section 4.7 of this report.  
 4 Acceptable intersection vehicle delay based on the LOS standards shown in Table 4-1 and Table 4-2.  
 5 Appendix 6.1 & 6.2 include intersection LOS Without Improvements  
 6 Project only average intersection delay increase (With Project - Without Project).  
 7 Project Fair Share Calculation based on the City of Corona Traffic Study Guidelines: [Project Only/(With Project - Acceptable Delay)]  
 8 Improvements are included for intersections within Arantine Hills Specific Plan (Int. #6 and #15). Therefore, intersection delay is not anticipated to exceed LOS Threshold.  
 9 TS = Traffic Signal; CSS = Cross-street Stop; AWS = All-Way Stop; RDB = Roundabout

**Intersection Summary**

HCM 6th Ctrl Delay	48.3
HCM 6th LOS	D

**Notes**

User approved pedestrian interval to be less than phase max green.  
 User approved volume balancing among the lanes for turning movement.

Lanes, Volumes, Timings  
7: I-15 SB Ramps & El Cerrito Rd.
