## **RE: Terrano II Multi-Family Development at Dos Lagos Air Quality – City of Corona**

The purpose of this air quality screening letter is to identify air quality impacts, if any, which may be created from the construction and operation of the proposed 50-unit Apartment complex on a 2.96 acre project site within Planning Area 1 of the Dos Lagos Specific Plan. The site is located on the west of Temescal Canyon Road and north of Dos Lagos Drive in the City of Corona.

Planning Area 1 of the Dos Lagos Specific Plan was entitled in 2018 and included a 276-unit apartment complex, a 107 room hotel, 6,100 square-feet (SF) of commercial uses, 10,300 SF of restaurant uses (4,000 SF quality restaurant use and 6,300 SF high-turnover sit-down restaurant use), and a 20-fueling position gas station with convenience store and car wash, of which the apartment complex, hotel, and gas station are completed and opened.

The proposed Project consists of replacing the entitled retail and restaurant uses with 50 multifamily (low-rise) apartment dwelling units within eight (8) buildings. In addition, the Project would not install fireplaces or hearths of any type. Access for the proposed apartments will be provided via the existing internal circulation system and no new public access driveway are proposed. This project is the last development piece to Planning Area 1 of the Dos Lagos Specific Plan.

Construction within Dos Lagos Planning Area 1 is generally completed with the exception of this remaining lot. Construction would start early 2024 and be completed less than one year later.

Once construction is completed the proposed project would generate operational air quality emissions. These operational emissions would originate from daily vehicle operations, use of consumer products, and from landscaping equipment.

Matt McKinlay  
Rexco Development

**Fax 760-689-4943**

Air quality impacts related to construction and daily operations were calculated using the latest CalEEMod 2020.4.0 air quality and GHG model, which was developed by Breeze Software for South Coast Air Quality Management District (SCAQMD). The City of Corona recognizes the CalEEMod Version 2020.4.0 as an acceptable model for projects of this nature. The Air Quality modeling is proved as **Attachment A** to this report.

### **Regional Air Quality Significance Thresholds**

Regional Air quality screening criteria for the City of Corona utilize South Coast Air Quality Management District's (SCAQMD) Air Quality Thresholds. The screening thresholds for construction and daily operations are shown in Table 1.

**Table 1: City of Corona Regional Air Quality Significance Thresholds**

Pollutant	Total Emissions (Pounds per Day)
<b>Construction Emissions</b>	
Respirable Particulate Matter (PM <sub>10</sub> / PM <sub>2.5</sub> )	150 / 55
Nitrogen Oxide (NO <sub>x</sub> )	100
Sulfur Oxide (SO <sub>x</sub> )	150
Carbon Monoxide (CO)	550
Reactive Organic Gases (ROG) SCAQMD	75
<b>Operational Emissions</b>	
Pollutant	Total Emissions (Pounds per Day)
Respirable Particulate Matter (PM <sub>10</sub> / PM <sub>2.5</sub> )	150 / 55
Nitrogen Oxide (NO <sub>x</sub> )	55
Sulfur Oxide (SO <sub>x</sub> )	150
Carbon Monoxide (CO)	550
Reactive Organic Gases (ROG) SCAQMD	55

### **Localized Significance Thresholds**

In June 2003 the SCAQMD proposed a methodology for calculating Localized Significance Thresholds (LSTs) for NO<sub>2</sub>, CO, PM<sub>2.5</sub> and PM<sub>10</sub>. The LST methodology was developed to be used as a tool to assist lead agencies to analyze localized impacts associated with project-specific level proposed projects and would not be applicable to regional projects such as general plans. The LST methodology was last updated to incorporate the most recent ambient air quality

standards (July 2008). (South Coast Air Quality Management District, 2008). The LST methodology is often utilized by most agencies governed under SCAQMD CEQA review. SCAQMD developed mass rate look-up tables for projects to assist agencies with development of LSTs (South Coast Air Quality Management District, 2014).

Per the requirements of SCAQMDs LSTs methodology, emissions for gases in attainment such as NO<sub>2</sub> and CO are calculated by adding emission impacts from the project development to the peak background ambient NO<sub>2</sub> and CO concentrations and comparing the total concentration to the most stringent ambient air quality standards. Also, according to SCAQMD Rule 403, emissions for non-attainment particulate matter such as PM 10 and PM 2.5 can produce no more than 10.4 µg/m<sup>3</sup>. The LSTs derived by SCAQMD differentiated by Source Receptor area for which the proposed Project is would be represented by SRA #22 within the City of Corona. The Project was analyzed using a worst-case construction schedule using the appropriate equipment and quantities for this scenario. The Project site would not actively disturb more than 2 acres at any given time. Table 2 shows the worst-case Project LST at 25 meters (SCAQMD, 2009).

**Table 2: LST Emission Thresholds**

Pollutant	LST @ 25 meters (lb/day)
CO (Corrected utilizing NO <sub>2</sub> /NO <sub>x</sub> Ratio) Construction and Operation	1,007
PM <sub>10</sub> (Construction)	6
PM <sub>10</sub> (Operation)	2
PM <sub>2.5</sub> (Construction)	5
PM <sub>2.5</sub> (Operation)	2
NO <sub>2</sub> (Corrected utilizing NO <sub>2</sub> /NO <sub>x</sub> Ratio) Construction and Operation	170

### **Project Related Construction Emissions**

Construction of the project would begin shortly after the approval of the Proposed Project subdivision. Mass grading of the lot has been previously completed as part of the master plan so all grading necessary will be minimal and would mainly consist of footing preparations and finish grading, paving and architectural coating. This analysis assumes construction begins in 2024 and would be completed in less than one year. CalEEMod default settings were used which are based on the project site size and number of units proposed. These inputs would be conservative since limited grading is required. The proposed construction schedule and construction equipment list is identified in Table 3.

 phone 760-473-1253  
 Fax 760-689-4943

**Table 3: Proposed Construction Phase and Duration**

Equipment Identification	Proposed Start	Proposed Completion	Quantity
<b>Site Preparation</b>	1/1/2024	1/3/2024	
Graders			1
Tractors/Loaders/Backhoes			1
<b>Grading</b>	1/4/2024	1/11/2024	
Graders			1
Rollers			1
Tractors/Loaders/Backhoes			2
<b>Building Construction</b>	1/12/2024	11/14/2024	
Cranes			1
Forklifts			2
Generator Sets			1
Tractors/Loaders/Backhoes			1
Welders			3
<b>Paving</b>	11/15/2024	11/28/2024	
Pavers			1
Paving Equipment			1
Rollers			2
<b>Architectural Coating</b>	11/15/2024	11/28/2024	
Air Compressors			1

This equipment list is based upon equipment inventory and estimates within CalEEMod using default settings.

Based on the modeling within CalEEMod, the construction emissions, which are reported in lbs/day, are shown in Table 4. Based on these findings, the project construction activities would have a less than significant regional air quality impacts and a less than significant localized impacts.

**Table 4: Expected Daily Construction Emissions Summary Lb/Day**

Year	ROG	NO <sub>x</sub>	CO	SO <sub>2</sub>	PM <sub>10</sub> (Dust)	PM <sub>10</sub> (Exhaust)	PM <sub>10</sub> (Total)	PM <sub>2.5</sub> (Dust)	PM <sub>2.5</sub> (Exhaust)	PM <sub>2.5</sub> (Total)
2024 (lb/day)	32.91	13.21	15.77	0.03	0.64	0.54	1.10	0.15	0.52	0.67
<b>Significance Threshold (lb/day)</b>	75	100	550	150	-	-	150	-	-	55
<b>Localized Significance Threshold</b>		170	1,007				6			5
<b>SCAQMD/LST Impact?</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	-	-	<b>No</b>	-	-	<b>No</b>
Expected Construction emissions are based upon CalEEMod modeling assumptions for equipment and durations listed in Table 2 above. CalEEMod Daily Summer and Winter output is attached to this letter.										

### Project Related Operational Emissions

As previously discussed, operational emissions from Area, Energy, Mobile sources are also calculated within CalEEMod. The program is largely based on default settings which are automatically populated throughout the model based on the imputed land use. Southern California Edison averages for utility emissions were utilized for the calculations throughout the model. The model assumes that residential units includes a mix of various hearth options. Since the Project would not install hearth options, all hearths were removed from the model.

Traffic Generation was estimated to be 337 average daily trips (LL&G, 2023) and was utilized within CalEEMod. The calculated operational emissions are identified in Table 5 below. In addition, Table 4 include regional SCAQMD significance thresholds and LSTs.

CalEEMod utilized the proposed land use and then estimates worst-case air quality emissions from trip generations built into the model and include vehicle emission rates from EMFAC. The EMFAC model is built into the CalEEMod software. Estimates are provided for both the Summer and Winter operational months.

Based on the findings of the Air Quality modeling in CalEEMod daily operational activities would generate less than significant LST impact and would also generate less than significant regional air quality impacts.
