

BUILDING ADVISORY

Flag Poles

August 14, 2024

Flag poles not exceeding an exposed height of 30 feet are exempt from a building permit. Property owners are responsible for installing the flag pole according to the manufacturer's installation instructions based on the design wind speed for the property per the California Building Code.

Flag poles exceeding an exposed height of 30 feet are subject to a building permit before installation. A site plan of the property along with a typical flag pole diagram shown below should be submitted to the Planning and Development Department prior to the installation of the flag pole. The footing size associated with the height and type of flag pole shall be supported by engineering calculations or the manufacturer's specifications for the installation.
