

IMAGE SENSOR CAMERA MOUNTING DETAIL

NOTE:

1. IF THE LUMINAIRE ARM IS TOO SHORT TO CENTER THE CAMERA OVER THE FIELD OF VIEW, ESPECIALLY ON WIDE ROADWAYS, THEN AN EXTENSION BRACKET ON THE MAST ARM MAY BE THE BETTER CHOICE. CENTERING THE CAMERA IS JUST AS IMPORTANT AS GAINING CAMERA HEIGHT. THE MAST ARM MOUNTING WOULD END UP WITH A CAMERA HEIGHT OF ABOUT 25 FEET WHEN USING A 6 FOOT EXTENSION BRACKET.
2. ADDITIONAL DETAILED SPECIFICATIONS ARE AVAILABLE FOR TRAFFIC SIGNAL CAMERA DETECTION SYSTEM UPON REQUEST
3. A CAMERA DETECTION SYSTEM SHALL BE USED FOR ALL TRAFFIC SIGNALS UNLESS OTHERWISE APPROVED BY THE PUBLIC WORKS DIRECTOR.
